Early China Li Feng, 2013-12-30 A critical new interpretation of the early history of Chinese civilization based on the most recent scholarship and archaeological discoveries

Ancient History of China Shelia Hollihan-Elliot, 2014-09-02 China is one of the world's oldest uninterrupted civilizations and the essential culture and identity of the Chinese people. The Chinese Way was formed more than 2,000 years ago. This volume chronicles the development of Chinese civilization from Neolithic times when agriculture revolutionized society to the early first century A.D. when the Han dynasty's triumph over a usurper firmly established a social and governmental model that would survive into the 20th century. *Ancient History of China* presents China's important formative legends, relates the story of China's early Bronze and Iron Age cultures, chronicles the chaotic periods of warfare that preceded the unification of the country in the third century B.C. and introduces such influential figures as the philosopher Confucius and the emperor Shi Huang Di who built the Great Wall and commissioned the sculpting of a huge terra cotta army to guard his grave. Students will be fascinated by this fast-moving and informative account.

The Beginnings of Chinese Civilization Li Ki, 1957

The Origins of Chinese Civilization David N. Keightley, 2023-11-15 The seventeen contributors to this interdisciplinary volume bring to the study of early China the analytical concerns of archeology, art history, botany, climatology, cultural and physical anthropology, ethnography, epigraphy, linguistics, metallurgy, and political and social history. Readers interested in such topics as the origin of rice or millet, agriculture, the origin of writing, the nature of the tribe and the processes of state formation will find much value here. They will find too major hypotheses about the cultural importance of ecogeographical zones in China. Neolithic interaction between the east coast and Central Plains, the remarkable homogeneity of early Chinese crania, and the links between the Hsia, Shang, and Chou dynasties. Relying on recently published archaeological evidence and the insights gained from carbon 14 and thermoluminescent datings, the authors provide original and significant interpretations of the nature of Chinese civilization in its formative stage and the processes by which civilizations form. Since there is little doubt that the complex of culture traits which defines Chinese civilization in the second and first millennia B.C. developed from a Chinese Neolithic stage, the origin of the Chinese civilization is worth studying not only in its own right but as an instance of the indigenous development of civilizations in general. This volume will appeal to all who are interested in the genesis of civilization and the transition from the Neolithic to the Bronze Age. It summarizes that state of present knowledge about China and suggests research strategies and hypotheses for the future.
