The Pannonian Basin A Study In Basin Evolution:

The Pannonian Basin Leigh Handy Royden, 1988 **Pannonian Basin**, 2011 *The Pannonian Basin Maps* Leigh H. Royden, Ferenc Horvath, **Basin Analysis in Petroleum Exploration** P.G. Teleki, R.E. Mattick, János Kókai, 2012-12-06

This volume summarizes in 16 chapters the petroleum geology of the B k s basin with respect to its geological setting in the Pannonian Basin. The work was accomplished by a joint effort of the Hungarian Oil and Gas Co and U S Geological Survey. In contrast with other books that discuss the geology of Hungary, this volume identifies in detail potential source rocks and reservoir rocks and evaluates the maturation, generation, migration and entrapment of hydrocarbons. The outstanding points are:

- 1 its summary of the petroleum geology of the B k s basin with respect to its structural and sedimentological setting in the Pannonian Basin
- 2 the identification of geographic areas, structural trends and stratigraphic zones that remain relatively unexplored
- 3 a summary of petroleum plays with an assessment of their recoverable undiscovered resources of oil and gas

This book is primarily for petroleum geologists interested in oil and gas exploration in Hungary and earth scientists interested in the geology of the Pannonian Basin.

Geodynamics of Rifting P.A. Ziegler, 2015-12-04. This volume contains papers giving an interdisciplinary review of 12 major rift systems from North and South America, Africa, Europe and Asia. These papers are written by an international group of academic and industrial specialists, each of whom is most knowledgeable about the respective rift. The analyzed rifts were selected on the basis of availability of an as complete as possible geological and geophysical data base. Thirteen papers deal with geodynamic processes governing the evolution of rifts. A comprehensive digest of the available stratigraphic, structural, geophysical and petrological data, together with an extensive list of references, is provided for each of the analyzed rift systems. The megatectonic setting and dynamics of evolution of each basin is discussed. Geodynamic models are tested against the record of the analyzed rifts. The question of active as against passive rifting is addressed. The rifts analyzed range in age from Precambrian to Recent and cover a wide spectrum of megatectonic settings. There is discussion of the evolution of rifts in a plate tectonic frame. The case histories are followed by discussions addressing the global setting of rifts and geodynamic processes active during the development of rifted basins.

The Mediterranean Basins Bernard Durand, 1999. The coexistence in space and time of growing mountain belts and actively extending basins poses a number of yet unsolved questions in terms of mechanics. This problem is particularly crucial in the Mediterranean regions where all Cenozoic basins opened in the internal zones of mountain belts. This volume brings together contributions from geologists and geophysicists in the quest to solve the complex dynamic problem posed by the Mediterranean region. It presents a wealth of new data on various topics centred on the Mediterranean region, from the deep mantle structure to the detailed geometry of sedimentary basins.
