WHO recommended classification of pesticides by hazard and guidelines to classification, 2019 edition

,2020-04-30 WHO Recommended Classification of Pesticides by Hazard and Guidelines to Classification 2009

International Program on Chemical Safety,World Health Organization,2010 The WHO Recommended Classification of Pesticides by Hazard was approved by the 28th World Health Assembly in 1975 and has since gained wide acceptance When it was published in the WHO Chronicle 29 397 401 1975 an annex which was not part of the Classification illustrated its use by listing examples of classification of some pesticidal active ingredients and their formulations Later suggestions were made by Member States and pesticide registration authorities that further guidance should be given on the classification of individual pesticides Guidelines were first issued in 1978 and have since been revised and reissued every few years Up until the present revision the original guidelines approved by the World Health Assembly in 1975 have been followed without amendment In December 2002 the United Nations Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonized System of Classification and Labelling of Chemicals UNCETDG GHS approved a document called The Globally Harmonized System of Classification and Labelling of Chemicals with the intent to provide a globally harmonized system¹ GHS to address classification of chemicals labels and safety data sheets The GHS with subsequent revisions is now being widely used for the classification and labeling of chemicals worldwide For this revision of the Classification the WHO Hazard Classes have been aligned in an appropriate way with the GHS Acute Toxicity Hazard Categories for acute oral or dermal toxicity as the starting point for allocating pesticides to a WHO Hazard Class with adjustments for individual pesticides where required It is anticipated that few of the more toxic pesticides will change WHO Hazard Class as a result of this change As has always been the case the classification of some pesticides has been adjusted to take account of severe hazards to health other than acute toxicity as described in Part II The GHS Acute Toxicity Hazard Category for each pesticide is now presented alongside the existing information Page 1 Toxicological Effects of Veterinary Medicinal Products in Humans Kevin Woodward,2012-12-31 Toxicological Effects of Veterinary Medicinal Products in Humans is the first definitive guide to discuss the adverse effects of veterinary medicinal products in humans The chapters focus on occupational safety and consumer issues and examine the circumstances under which exposure is likely to occur To be in context it reviews this against the background of adverse health effects from other sources in the veterinary and farming professions The book examines adverse drug effects reported to regulatory agencies mainly the FDA s Center for Veterinary Medicine and then

considers a series of individual drugs including antibiotics anaesthetics and organophosphorus compounds The chapters also discuss the fundamental aspects of regulatory issues relating to safety assessment and examine the manner in which user safety is assessed prior to authorisation approval and what measures can be taken after authorisation approval in the light of findings from pharmacovigilance activities There is growing concern over the issue of antimicrobial resistance and the contribution made by veterinary medicinal products This too is addressed along with the significance to human health and measures that can be taken to mitigate the effects if any of the use of antibiotics in animals e g prudent use measures The book will be an essential resource for medical practitioners in hospitals and general practice pharmaceutical industry scientists analysts regulators and risk managers

Human Papillomaviruses IARC Working Group on the Evaluation of Carcinogenic Risks to Humans. Meeting, 2007 This ninetieth volume of the IARC Monographs on the Evaluation of Carcinogenic Risks to Humans considers human papillomaviruses HPVs which were evaluated by a previous Working Group IARC 1995 The monograph in the present volume incorporates new data that have become available during the past decade HPVs represent the most common infectious agents that are transmitted sexually throughout the world the major risk factors are behaviors associated with sexual activity Although most infections are asymptomatic and are cleared within a period of 2 years genital HPV infection can lead to clinical disease including anogenital warts cervical neoplasia cervical cancer and other anogenital cancers The risk for persistence of infection and progression of the more than 40 genital HPV types to grade 3 cervical intraepithelial neoplasia CIN3 and cancer differs widely Persistent infection with carcinogenic HPVs occurs in virtually all cases of cervical cancer Previous evaluations of HPVs have classified types 16 and 18 as carcinogenic to humans group 1 types 31 and 33 as probably carcinogenic to humans Group 2A and some types other than 16 18 31 and 33 as possibly carcinogenic to humans Group 2B At that time the evaluation of types 16 and 18 was based on the strong association between infection with these HPVs and cervical cancer For types 31 and 33 the association was less strong The new epidemiological data reviewed in the present volume strongly support and further confirm the previous evaluation of types 16 and 18 and provide new evidence for other HPVs This information which includes strong evidence of carcinogenicity at sites other than the cervix supports new evaluations for several other HPV types in addition to those mentioned above Since the Working Group was convened in 2005 important innovations in HPV prophylaxis have occurred and these needed to be included in this volume To date two prophylactic vaccines have been developed and used in large multicentric trials This prophylactic vaccination is expected to reduce the incidence of HPV related genital diseases However the benefits of prophylactic vaccines in a broad public health perspective will be achieved only if such vaccines can be provided to those groups of women for whom access to cervical cancer screening services is most problematic Therefore the development of second generation vaccines that are expected to be cheaper easier to deliver and to provide T cell response against pre existing HPV infections is highly desirable

Contaminant Geochemistry Brian Berkowitz, Ishai Dror, Bruno

Yaron,2014-04-22 In this updated and expanded second edition new literature has been added on contaminant fate in the soil subsurface environment In particular more data on the behavior of inorganic contaminants and on engineered nanomaterials were included the latter comprising a group of emerging contaminants that may reach the soil and subsurface zones New chapters are devoted to a new perspective of contaminant geochemistry namely irreversible changes in pristine land and subsurface systems following chemical contamination Two chapters were added on this topic focusing attention on the impact of chemical contaminants on the matrix and properties of both liquid and solid phases of soil and subsurface domains Contaminant impacts on irreversible changes occurring in groundwater are discussed and their irreversible changes on the porous medium solid phase are surveyed In contrast to the geological time scale controlling natural changes of porous media liquid and solid phases the time scale associated with chemical pollutant induced changes is far shorter and extends over a human lifetime scale
