INFORMATION

ANTS HAVE INCREDIBLE STRENGTH

They can lift & carry between 10 AND 50 TIMES THEIR BODYWEIGHT

The Asian weaver ant, for example, can lift 100 times its own mass.

ANTS DON'T HAVE LUNGS

Instead, ants breathe in oxygen through a series of holes called "spiracles", located all over their body. Through a network of tubes, these spiracles distribute oxygen to every cell in their body.

Because of their small size, ants don't have room in their bodies to accommodate a complex respiratory system like humans have.

ANTS DON'T HAVE EARS

Instead of ears, ants use vibrations to hear. Their subgenual organ picks up vibrations in the ground, which helps them both while foraging for food and allows them to broadcast an alarm signal to their fellow ants.

ANTS HAVE TWO STOMACHS

Unlike humans, ants have two stomachs: one for holding food for their own consumption, and a second to hold food that will be shared with other ants. Their second stomach allows the colony to divide their responsibilities: one group forages for food, the other ants are able to stay behind and tend to the duties of the queen and the nest.

SOME ANT SPECIES ARE ASEXUAL
