

CURIOUS KIWI

Kiwi are New Zealand's most famous native animal. There are 5 species of kiwi, all of which have some special features that make them very unusual birds.

Kiwi are part of a group of flightless birds known as ratites. Other examples of ratites include ostriches, emu and the extinct moa.

Scientists have discovered that kiwi are most closely related to the extinct giant elephant bird from Madagascar!

Kiwi have unusual features for a bird:

- chicks are well developed when they hatch
- heavy leg bones and skeletons

CURIOUS KIWI

Kiwi evolved when there were no predators around. They could live safely on the forest floor, without needing to fly. They do have very small wings, but can't use them to fly.

Because kiwi do not fly, their feathers have evolved to become quite fluffy, which helps keep them warm.

Kiwi are the only bird in the world with nostrils at the tip of their long beaks. They use their great sense of smell to find food up to 3cm underground. They also use their beak to detect the vibrations of small animals moving.

Kiwi are omnivores which means they eat a bit of everything!

The Kiwi Fact
