The Outer Circle Women In The Scientific Community:

The Outer Circle Harriet Zuckerman, Jonathan R. Cole, John T. Bruer, 1992 **Leaving Science** Anne E.

Preston, 2004-04-29 The past thirty years have witnessed a dramatic decline in the number of U S students pursuing advanced degrees in science and an equally dramatic increase in the number of professionals leaving scientific careers Leaving Science provides the first significant examination of this worrisome new trend Economist Anne E Preston examines a wide range of important questions Why do professionals who have invested extensive time and money on a rigorous scientific education leave the field Where do these scientists go and what do they do What policies might aid in retaining and improving the quality of life for science personnel Based on data from a large national survey of nearly 1 700 people who received university degrees in the natural sciences or engineering between 1965 and 1990 and a subsequent in depth follow up survey Leaving Science provides a comprehensive portrait of the career trajectories of men and women who have earned science degrees Alarming by the end of the follow up survey only 51 percent of the original respondents were still working in science During this time federal funding for scientific research decreased dramatically relative to private funding Consequently the direction of scientific research has increasingly been dictated by market forces and many scientists have left academic research for income and opportunity in business and industry Preston identifies the main reasons for people leaving scientific careers as dissatisfaction with compensation and career advancement difficulties balancing family and career responsibilities and changing professional interests Highlighting the difference between male and female exit patterns Preston shows that most men left because they found scientific salaries low relative to perceived alternatives in other fields while most women left scientific careers in response to feelings of alienation due to lack of career guidance difficulty relating to their work and insufficient time for their family obligations Leaving Science contains a unique blend of rigorous statistical analysis with voices of individual scientists ensuring a rich and detailed understanding of an issue with profound consequences for the nation s future A better understanding of why professionals leave science can help lead to changes in scientific education and occupations and make the scientific workplace more attractive and hospitable to career men and women

The Science Education of American Girls Kim Tolley, 2014-04-08 The Science Education of American Girls provides a comparative analysis of the science education of adolescent boys and girls and analyzes the evolution of girls scientific interests from the antebellum era through the twentieth century Kim Tolley expands the understanding of the structural and cultural obstacles that emerged to transform what in the early nineteenth century was regarded as a girl s subject As the form and content of pre college science education developed Tolley argues direct competition between the sexes increased Subsequently the cultural construction of science as a male subject limited access and opportunity for girls

China's Scientific Elite Cong Cao, 2004-07-31 China s Scientific Elite is a study of those scientists holding China s highest academic honour membership of the Chinese Academy of Sciences Having carried out extensive systematic data collection of CAS members Cao examines the social stratification system of the Chinese science community and the way in which politics and political interference has effected the stratification The book then goes on to compare the Chinese system to the stratification of the US scientific elite The conclusions are fascinating not least because one national elite resides in a democratic liberal social system and the other in an authoritarian social system

The Psychology of Women at Work Michele A. Paludi, 2008-06-30 According to the U S Department of Labor women made up 46.4 percent of the civilian labor force in 2005 and that percentage is expected to reach 47 percent by 2014 Professional and health related occupations are the fastest growing roles for women with computer related environmental and educational fields also drawing increasingly on the female workforce The bottom line at a macro level is that more and more women are driving the country s economic development But with that phenomenon come questions challenges and concerns on many diverse levels Debates rage on psychological topics such as the effect the increasing number of women at work has on

marriage and divorce family and children women s identities and stress levels and overall their physical and mental health Psychologist Michele A Paludi and her team of experts from across fields examine all aspects of women at work the pros and cons how it is changing American society its women their relationships partners and children The factors that fuel women achievers are also discussed by female scholars and experts in the field who illustrate points with vignettes and their own career development stories Issues in the workplace affecting women s wellbeing are also discussed including sexual harassment and related laws pregnancy related work policy and regulations challenges for women bosses and career moms the glass ceiling racism women s relationships with male coworkers and issues that rise when a woman is the breadwinner This unique and timely set will appeal to those who are interested in psychology women s studies education law business and public policy

Scientific Elite , Scientific Elite is about Nobel prize winners and the well defined stratification system in twentieth century science It tracks the careers of all American laureates who won prizes from 1907 until 1972 examining the complex interplay of merit and privilege at each stage of their scientific lives and the creation of the ultra elite in science The study draws on biographical and bibliographical data on laureates who did their prize winning research in the United States and on detailed interviews with forty one of the fifty six laureates living in the United States at the time the study was done Zuckerman finds laureates being successively advantaged as time passes These advantages are producing growing disparities between the elite and other scientists both in performance and in rewards which create and maintain a sharply graded stratification system
