Dreams, Neuroscience, and Psychoanalysis Keramat Movallali, 2017-02-03 Dreams Neuroscience and Psychoanalysis sets out to give a scientific consistency to the question of time and find out how time determines brain functioning Neurological investigations into dreams and sleep since the mid 20th century have challenged our scientific conception of living beings On this basis K ramat Movallali reviews the foundations of modern neurophysiology in the light of other trends in this field that have been neglected by the cognitive sciences trends that seem to be increasingly confirmed by recent research The author begins by giving a historical view of fundamental questions such as the nature of the living being according to discoveries in ethology as well as in other research especially that which is based on the theory of the reflex It becomes clear in the process that these findings are consistent with the question of time as it has been considered in some major contemporary philosophies This is then extended to the domain of dreams and sleep as phenomena that are said to be elucidated by the question of time The question is then raised can dreaming be considered as a drive Based on the Freudian discovery of the unconscious and Lacan s teachings Movallali seeks to provide a better understanding of the drives in general and dreams in particular He explores neuroscience in terms of its development as well as its discoveries in the function of dreaming as an altered mode of consciousness The challenge of confronting psychoanalysis with neuroscience forces us to go beyond their division and opposition Psychoanalysis cannot overlook what has now become a worldwide scientific approach Neuroscience just like the cognitive sciences will be further advanced by acknowledging the desiring dimension of humanity which is at the very heart of its being as essentially related to the question of time It is precisely this dimension that is at the core of psychoanalytic practice Dreams Neuroscience and Psychoanalysis will appeal to psychoanalysts and psychoanalytic psychotherapists as well as neuroscientists psychologists ethologists philosophers and advanced students studying across these fields

Dreaming Jennifer M. Windt,2023-12-05 A comprehensive proposal for a conceptual framework for describing conscious experience in dreams integrating philosophy of mind sleep and dream research and interdisciplinary consciousness studies Dreams conceived as conscious experience or phenomenal states during sleep offer an important contrast condition for theories of consciousness and the self Yet although there is a wealth of empirical research on sleep and dreaming its potential contribution to consciousness research and philosophy of mind is largely overlooked This might be due in part to a lack of conceptual clarity and an underlying disagreement about the nature of the phenomenon of dreaming itself In Dreaming Jennifer Windt lays the groundwork for solving this problem She develops a conceptual framework describing not only what it means to say that dreams are conscious experiences but also how to locate

dreams relative to such concepts as perception hallucination and imagination as well as thinking knowledge belief deception and self consciousness Arguing that a conceptual framework must be not only conceptually sound but also phenomenologically plausible and carefully informed by neuroscientific research Windt integrates her review of philosophical work on dreaming both historical and contemporary with a survey of the most important empirical findings This allows her to work toward a systematic and comprehensive new theoretical understanding of dreaming informed by a critical reading of contemporary research findings Windt s account demonstrates that a philosophical analysis of the concept of dreaming can provide an important enrichment and extension to the conceptual repertoire of discussions of consciousness and the self and raises new questions for future research

The Storytelling Animal Jonathan Gottschall, 2020-06-11 Insightful draws from disparate corners of history and science to celebrate our compulsion to storify everything around us The New York Times Book Review Humans live in landscapes of make believe We spin fantasies We devour novels films and plays Even sporting events and criminal trials unfold as narratives Yet the world of story has remained an undiscovered and unmapped country It s easy to say that humans are wired for story but why In this delightful original book Jonathan Gottschall offers the first unified theory of storytelling He argues that stories help us navigate life s complex social problems just as flight simulators prepare pilots for difficult situations Storytelling has evolved like other behaviors to ensure our survival Drawing on the latest research in neuroscience psychology and evolutionary biology Gottschall tells us what it means to be a storytelling animal Did you know that the more absorbed you are in a story the more it changes your behavior That all children act out the same kinds of stories whether they grow up in a slum or a suburb That people who read more fiction are more empathetic Of course our story instinct has a darker side It makes us vulnerable to conspiracy theories advertisements and narratives about ourselves that are more truthy than true National myths can also be terribly dangerous Hitler s ambitions were partly fueled by a story But as Gottschall shows stories can also powerfully change the world for the better We know we are master shapers of story The Storytelling Animal finally reveals how stories shape us Lively San Francisco
