Smith, 2021-11-23 For the past million years individuals have engaged in multitasking as they interact with the surrounding environment and with each other for the acquisition of daily necessities such as food and goods Although culture is often perceived as a collective process it is individual people who use language experience illness expend energy perceive landscapes and create memories These processes were sustained at the individual and household level from the time of the earliest social groups to the beginnings of settled agricultural communities and the eventual development of complex societies in the form of chiefdoms states and empires Even after the advent of civilization about 6 000 years ago human culture has for the most part been created and maintained not by the actions of elites as is commonly proclaimed by many archaeological theorists but by the many thousands of daily actions carried out by average citizens With this book Monica L Smith examines how the archaeological record of ordinary objects used by ordinary people constitutes a manifestation of humankind s cognitive and social development *A Prehistory of Ordinary People* offers an impressive synthesis and accessible style that will appeal to archaeologists cultural anthropologists and others interested in the long history of human decision making [The Unfolding of Time](#) Michael A. Susko, 2025-05-01 *The Unfolding of Time A Logarithmic Model for Astronomical Biological and Cultural Evolution* presents a unifying framework for understanding complexity across cosmic biological and cultural domains Rather than treating the history of the universe as a linear sequence of disconnected events this work proposes that major evolutionary thresholds from the formation of galaxies and rocky planets to the emergence of life and symbolic culture follow

a rhythmic pattern when plotted on a logarithmic timescale Drawing on current astronomical research evolutionary biology and anthropological insight the model suggests that complexity emerges in distinct pulses each nested within a broader unfolding This interdisciplinary synthesis invites a rethinking of time s structure not as a flat continuum but as a layered rhythm of transformation The result is a compelling vision of the universe s evolution in which deep regularities shape the appearance of novelty across scales
