The Perception Of Stimulus Relations Discrimination Learning And Transposition:

The Perception of Stimulus Relations Hayne W. Reese, 2013-10-22 The Perception of Stimulus Relations Discrimination Learning and Transposition focuses on the processes methodologies and approaches involved in discrimination learning and transposition The book first offers information on stimulus equivalence transposition of paradigms and the transposition and relation perception problems The manuscript then examines measurement training subject and test variables Topics include stimulus and procedural variables effect of direction of transposition test phylogenetic comparisons concept knowledge and speed of original learning The publication elaborates on form transposition including transposition of visual forms and the meaning of form and form transposition The text then takes a look at relational and absolute theories summary of findings and evaluation of theories and outline of a theory of transposition Discussions focus on assumptions and basic deductions effect of absolute stimulus components effect of noticing change in stimuli from training to test and stimulus similarity The book is a valuable source of data for readers interested in discrimination learning and transposition

The Perception of Stimulus Relations Hayne Waring Reese, 1968

Relational Frame Theory Steven C. Hayes, Dermot Barnes-Holmes, Bryan Roche, 2005-11-30 This volume goes beyond theory and gives the empirical and conceptual tools to conduct an experimental analysis of virtually every substantive topic in human language and cognition both basic and applied It challenges behavioral psychology to abandon many of the specific theoretical formulations of its most prominent historical leader in the domain of complex human behavior especially in human language and cognition and approach the field from a new direction It will be of interest to behavior theorists cognitive psychologists therapists and educators

Evidence-Based Educational Methods Daniel J. Moran, Richard W. Malott, 2004-05-07 A compendium of empirically verified instructional methods derived from research in behavioral analysis Coverage includes precision teaching direct instruction computerized teaching and personalized system of instruction as well as discussing the use of peer tutoring and chapters specific to teaching language cognition grammar and writing Book jacket

Problem of Meaning Behavioural and Cognitive Perspectives C. Mandell, A. McCabe, 1997-09-26 Problem of Meaning Behavioural and Cognitive Perspectives

Stimulus Class Formation in Humans and Animals T.R. Zentall, P.M. Smeets, 1996-10-24 Stimulus class formation has been studied independently by two groups of researchers One group has come out of a learning theory approach while the second has developed out of a behavior analytic tradition The purpose of the present volume is to further establish the ties between these two research areas while allowing for differences in approach to the questions asked The book is loosely organized around four themes The first two sections deal with what constitutes functional and equivalence classes in animals and humans In the third section the authors attempt to identify stimulus control variables that contribute to the formation of equivalences classes The last section deals with the complex issue of the role of verbal behavior in equivalence classes The goal of the book is to provide the reader with a better

understanding of the current state of research and theory in stimulus class formation It is also hoped that it will stimulate research into how and under what conditions stimulus classes can form

The Complex Mind David McFarland, Keith Stenning, Maggie McGonigle, 2012-05-17 Combining the study of animal minds artificial minds and human evolution this book examines the advances made by comparative psychologists in explaining the intelligent behaviour of primates the design of artificial autonomous systems and the cognitive products of language evolution

The Wiley Handbook of Contextual Behavioral Science Robert D. Zettle, Steven C. Hayes, Dermot Barnes-Holmes, Anthony Biglan, 2016-01-19 The Wiley Handbook of Contextual Behavioral Science describes the philosophical and empirical foundation of the contextual behavioral science movement it explores the history and goals of CBS explains its core analytic assumptions and describes Relational Frame Theory as a research and practice program This is the first thorough examination of the philosophy basic science applied science and applications of Contextual Behavioral Science Brings together the philosophical and empirical contributions that CBS is making to practical efforts to improve human wellbeing Organized and written in such a way that it can be read in its entirety or on a section by section basis allowing readers to choose how deeply they delve into CBS Extensive coverage of this wide ranging and complex area that encompasses both a rich basic experimental tradition and in depth clinical application of that experimental knowledge Looks at the development of RFT and its implications for alleviating human suffering

The Making of Human Concepts Denis Mareschal, Paul C. Quinn, S. E. G. Lea, 2010 Human adults appear different from other animals in their ability to form abstract mental representations that go beyond perceptual similarity In short they can conceptualize the world This apparent uniqueness leads to an immediate puzzle WHEN and HOW does this abstract system come into being To answer this question we need to explore the origins of adult concepts both developmentally and phylogenetically When does the developing child acquire the ability to use abstract concepts Does the transition occur around 2 years with the onset of symbolic representation and language Or is it independent of the emergence of language When in evolutionary history did an abstract representational system emerge Is there something unique about the human brain How would a computational system operating on the basis of perceptual associations develop into a system operating on the basis of abstract relations Is this ability present in other species but masked by their inability to verbalise abstractions Perhaps the very notion of concepts is empty and should be done away with altogether This book tackles the age old puzzle of what might be unique about human concepts Intuitively we have a sense that our thoughts are somehow different from those of animals and young children such as infants Yet if true this raises the question of where and how this uniqueness arises What are the factors that have played out during the life course of the individual and over the evolution of humans that have contributed to the emergence of this apparently unique ability This volume brings together a collection of world specialists who have grappled with these questions from different perspectives to try to resolve the issue It includes contributions from leading psychologists neuroscientists child and infant specialists and animal cognition

specialists Taken together this story leads to the idea that there is no unique ingredient in the emergence of human concepts but rather a powerful and potentially unique mix of biological abilities and personal and social history that has led to where the human mind now stands A must read for students and researchers in the cognitive sciences **Infant Perception:**

from Sensation to Cognition Leslie B. Cohen, Philip Salapatek, 2013-09-24 Infant Perception From Sensation to Cognition Volume I Basic Visual Processes focuses on the study and programmatic investigations of infant perception examining early sensory perceptual and cognitive systems This book is divided into five chapters Chapter 1 analyzes the major physiological and behavioral techniques used to measure infant vision Each technique is critically evaluated in terms of the method employed type of data that can be obtained and anatomy of the visual system The neuronal model to explain developmental changes and techniques used to assess infant visual preferences for patterns varying in amount of contour are discussed in Chapter 2 Chapter 3 demonstrates the value of the corneal reflection technique for the study of infant attention and visual scanning patterns while Chapter 4 examines the developmental changes and individual differences in early pattern perception The last chapter concentrates on the evidence of infant visual preferences for novelty and on the implications of such evidence for models of early recognition memory This publication is a good reference for pediatricians and clinicians concerned with infant perception
