Steel And Beyond New Strategies For Metal In Architecture:

Steel and Beyond Annette W. LeCuyer, 2001 Metal opens up a vast range of fascinating possibilities in today's building industry. Here the latest technical processes are presented together with examples from contemporary architecture. New conceptual strategies for structures, hybrid materials and constructions, computer-aided design and fabrication and the adaptation of techniques from aeroplane design and ship building. These new technical developments in design and production are radically changing the use of metals in building. Yesterday's standards and processes are rapidly becoming out-dated and it is high time that the most recent advances are documented in a systematic overview. Case studies examine significant recent buildings both completed and in design which illustrate ground-breaking concepts. These include Frank O. Gehry's Guggenheim Museum at Bilbao and the Experience Music project in Seattle, the Millennium Bridge by Norman Foster, Sendai Mediatheque by Toyo Ito, the Seattle Library by Rem Koolhaas. Each project is comprehensively documented in image and text, paying particular attention to the application and processing of metal and steel. **Materials for Architects**

The Architecture Reference & Specification Book Julia McMorrough, 2013-08 Most architectural standards references contain thousands of pages of details overwhelmingly more than architects need to know to know on any given day. The Architecture Reference Specification Book contains vital information that's essential to planning and executing architectural projects of all shapes and sizes in a format that is small enough to carry anywhere. It distills the data provided in standard architectural volumes and is an easy-to-use reference for the most indispensable and most requested types of architectural information. **Materials for Architects and Builders** Arthur Lyons, 2014-08-21

Materials for Architects and Builders provides a clear and concise introduction to the broad range of materials used within the construction industry and covers the essential details of their manufacture, key physical properties, specification and uses. Understanding the basics of materials is a crucial part of undergraduate and diploma construction or architecture-related courses and this established textbook helps the reader to do just that with the help of colour photographs and clear diagrams throughout. This new edition has been completely revised and updated to include the latest developments in materials research, new images, appropriate technologies and relevant legislation. The ecological effects of building construction and lifetime use remain an important focus and this new edition includes a wide range of energy-saving building components.

Build Beyond Zero Bruce King, Chris Magwood, 2022-06-16 Net Zero has been an effective rallying cry for the green building movement signaling a goal of having every building generate at least as much energy as it uses Enormous strides have been made in improving the performance of every type of new building and even more importantly renovating the vast and energy inefficient collection of existing buildings in every country If we can get every building to net zero energy use in the next few decades it will be a huge success but it will not be enough In *Build Beyond Zero* carbon pioneers Bruce King and Chris Magwood re envision buildings

as one of our most practical and affordable climate solutions instead of leading drivers of climate change They provide a snapshot of a beginning and map towards a carbon smart built environment that acts as a CO2 filter Professional engineers designers and developers are invited to imagine the very real potential for our built environment to be a site of net carbon storage a massive drawdown pool that could help to heal our climate The authors with the help of other industry experts show the importance of examining what components of an efficient building from windows to solar photovoltaics are made with and how the supply chains deliver all those products and materials to a jobsite Build Beyond Zero looks at the good and the bad of how we track carbon Life Cycle Assessment then takes a deep dive into materials with a focus on steel and concrete and biological architecture and wraps up with education policy and governance circular economy and where we go in the next three decades In Build Beyond Zero King and Magwood show how buildings are culprits but stand poised to act as climate healers They offer an exciting vision of climate friendly architecture along with practical advice for professionals working to address the carbon footprint of our built environment
