Steel Upheaval In A Basic Industry:

The Global Restructuring of the Steel Industry Anthony D'Costa, 1999-01-28 Drawing upon case studies of the steel industry in the US Japan South Korea Brazil and India this book explains how and why the steel industry has shifted from advanced capitalist countries to late industrializing countries Anthony P D Costa examines the relationship between industrial change and institutional responses to technological diffu *Steel* Donald F. Barnett, Louis Schorsch, 1983 **The U.S. Primary Iron and Steel Industry Since 1958**, 1985 *The Effects of Import Quotas on the Steel Industry* Louis Schorsch, 1984 Steel and Steelworkers John Hinshaw, 2012-02-01 *Steel and Steelworkers* is a fascinating account of the forces that shaped Pittsburgh big business and labor through the city s rapid industrialization in the mid nineteenth century its lengthy era of industrial maturity its precipitous deindustrialization toward the end of the twentieth century and its reinvention from hell with the lid off to America s most livable post industrial city Hinshaw examined a wide variety of company union and government documents oral histories and newspapers to reconstruct the steel industry and the efforts of labor business and government to refashion it A compelling report of industrialization and deindustrialization in which questions of organization power and politics prove as important as economics *Steel and Steelworkers* shows the ways in which big business and labor helped determine the fate of steel and Pittsburgh **Annual Outlook for U.S. Coal**, 1986 **Area Wage Survey**, 1990 Productivity: a Selected Annotated Bibliography, 1990 Productivity, 1990 **Bulletin of the Bureau of Labor Statistics**, 1990 Industrial Dynamics B. Carlsson, 2012-12-06 This book is based on the papers presented at a conference on New Issues in Industrial Economics held at Case Western Reserve University Cleveland Ohio June 8 10 1987 The conference was organized by the Research Program in Industrial Economics RPIE in the Department of Economics at CWRU and was sponsored by The Cleveland Foundation the Eaton Corporation and The Standard Oil Company later renamed BP America Inc Their generous support is gratefully acknowledged All of the papers have been revised in several cases extensively since their presentation at the conference One of the primary reasons for organizing the conference was the concern that Industrial Economics has become too narrowly focused in most academic programs largely being confined to Industrial Organization i e issues of public policy towards enterprise with emphasis on antitrust and regulatory policy This subject definition leaves out a number of interesting and important questions about how industries evolve over time what the role of technological change and organizational change is in that process and the associated structural changes within industries and firms The object of this book is to derme these issues and suggest a framework within which they can be analyzed I would like to thank all the conference participants for their contributions particularly my colleagues at CWRU Asim Erdilek and William S Peirce without whose encouragement and support the conference would not have taken place Antidumping Laws and the U.S. Economy Greg Mastel, 2016-09-16 This volume reviews the goals operation and history of American antidumping laws coupled with a strategy for using those laws to promote U S trade policy and economic

objectives in the post Uruguay Round GATT talks **Technology Transfer** Shastri Moonan, 2013-06-17 This study focuses on technology transfer in the steel mini mill industry It identifies two central issues how capacity is built and how demand is sustained developing a three dimensional perspective to bring into sharp focus the desirability and necessity of technology transfer The three dimensional perspective focuses on the changes in the marketplace for flat steel sheets the responsiveness and sensitivity to these market changes and applying the best available technology to obtain a high quality product Prior to this study technology transfer has been examined in a bivariate relationship namely how technology transfer contributed to the development process in developing countries and Newly Industrialized Countries NICs The framework formulated in this study showed that Japan was lagging behind all the steel producing countries because like the NICs it imported the physical and organizational technologies that fostered its prosperity Based on primary and secondary research this study revealed that high levels of operational efficiency and sophisticated product quality were achieved through continuous improvement culminating in Computer Integrated Manufacturing CIM consisting of Real Time Process Control On the other hand the research also revealed that China based the improvement of its steel industry on self reliance combined with judicious selection of foreign collaboration The theoretical underpinnings of the crucial issues in this study led to the development of an interactive model of technology transfer based upon stock and flow variables *In the Shadow of the Rising Sun* William S. Dietrich, 1991-09-15 Why is the United States unable to compete effectively with Japan What explains the inability of American political leaders to devise an industrial policy capable of focusing the energies of American business on the task of meeting the Japanese challenge How can America emerge from the shadow of the Rising Sun This book addresses these questions and proposes a controversial decision To get at the political roots of American economic decline businessman scholar William Dietrich puts the disciplined thinking of political philosophy comparative politics and international political economy to effective use in analyzing the source and nature of American institutional weakness Unlike many who have written on U S Japanese relations Dietrich does not seek a solution a particular new policy or institutional innovation such as an American counterpart to Japan's MITI Rather he emphasizes the systemic nature of America's problems The failures of management finance and politics are interlocking and reinforcing he shows and thus a change in the others that spell doom for any partial approach Most fundamental however are the political weaknesses of the system It is in the basic political inheritance of America reflected in the very design of the Constitution and the long dominance of Jeffersonian individualism over Hamiltonian statism that we must locate the roots of American impotence in the face of Japan's challenge As the problem is systemic so must the solution be equally wide ranging Nothing short of fundamental institutional reform Dietrich argues will succeed in reversing America's downward course Boasts about the victory of free market capitalism in the wake of the collapse of the Communist state directed system are premature and distract attention from the necessary recognition that it is the Japanese combination of the free market with a strong central state and a highly skilled professional

bureaucracy that has really proved triumphant in our modern age of advanced technology Only if we fully understand the reasons for Japanese success and American decline can we begin the arduous but crucial task of reconstructing the American polity to give it the power required to formulate and implement a national industrial policy that can regain for the United States its preeminent place among the world's industrial powers The alternative Dietrich describes in a chilling scenario is a Pax Nipponica that will find America playing second fiddle to Japan with economic cultural and political consequences that will make Britain's eclipse by the United States earlier in this century seem mild by comparison *Federal Support of U.S.*

Business Philip Webre, 1984 **Empirical Studies of Strategic Trade Policy** Paul Krugman, Alasdair Smith, 2007-12-01 Since the 1980s economists have used the concept of strategic trade policy which takes account of imperfect competition and increasing returns in the international marketplace to criticize conventional views about free trade According to the new view a government can take strategic steps to raise its income at another country's expense by subsidizing exports or erecting trade barriers protecting certain firms from foreign competition or promoting the development of new industries This volume looks at the experience of specific industries in order to determine the effectiveness of strategic trade policy in promoting economic growth The nine papers cover the U S and European auto industries the U S steel industry the commercial aircraft industry airline deregulation in Scandinavia and labor and industrial policy in Korea and Taiwan The authors refine the basic techniques for measuring policy effectiveness extend them to encompass industry dynamics and test the implications of new trade models International economists and trade experts in government and business will find important new insights into the role of strategic trade policy in international competitiveness The New International Division of Labour Guido Starosta, 2016-06-02 This book revisits the debate over the new international division of labour NIDL that dominated discussions in international political economy and development studies until the early 1990s It submits that a revised NIDL thesis can shed light on the specificities of capitalist development in various parts of the world today Taken together the contributions amount to a novel value theoretical approach to understanding the NIDL This rests upon the distinction between the global economic context that determines the constitution and dynamics of the NIDL and the evolving national political forms that mediate its development More specifically the authors argue that uneven development is an expression of the underlying essential unity of the production of relative surplus value on a world scale They substantiate and illustrate this argument through several international case studies including Argentina Brazil Ecuador Ireland South Korea Spain and Venezuela **Trade, Industrial Policy, and International Competition, Second Edition** Richard G. Harris, 2015-10-01 Richard Harris's now classic study on trade and industrial policy was written for the Royal Commission on the Economic Union and Development Prospects for Canada also known as the Macdonald Commission First published in 1985 when the Canadian economy faced dramatic changes arising from the emergence of manufacturing competitors among newly industrialized nations and increased protectionism in the US its recommendations were

instrumental in the negotiation of the North America Free Trade Agreement Addressing the key issues surrounding the design and choice of policies for the Canadian economy Trade Industrial Policy and International Competition reviews the theory and evidence concerning trade liberalization as a mechanism to enhance economic growth disinvestment in sections that are disadvantageous in the international marketplace and future problems for the marketing sector caused by increasing competition from developing countries Drawing from many streams of conventional economic thinking Harris develops an original and sophisticated model for assessing the broader economic impacts of trade liberalization on the Canadian economy He concludes that free trade and industrial policy should be regarded as complementary not substitutes for one another and recommends a free trade agreement with the United States as a top priority A new introduction by David Wolfe situates this work within its time and shows how Harris s analytical insights and policy prescriptions are as relevant today as they were originally crafted three decades ago

Remaking Human Geography (RLE Social & Cultural Geography)

Audrey Kobayashi, Suzanne Mackenzie, 2014-01-23 This book highlights the increasingly important contribution of geographical theory to the understanding of social change values economic political organization and ethical imperatives As a cohesive collection of chapters from well known geographers in Britain and North America it reflects the aims of the contributors in striving to bridge the gap between the historical materialist and humanist interpretations of human geography The book deals with both the contemporary issues outlined above and the situation in which they emerge industrial restructuring planning women s issues social and cultural practices and the landscape as context for social action

The Economy as a System of Power George Sternlieb, 2017-09-29 The articles in this volume address the fact and use of economic power in the American economy The institutional economists perspective exhibited here reflects a century long focus on and concern with economic power begun by Thorstein Veblen This volume presents a new generation of institutionalist scholars who add to that tradition a fresh and penetrating analysis of contemporary power centers and assessments of their use of power
