

The background of the cover is a cosmic scene. At the top, a dark blue and purple space filled with stars and nebulae transitions into a bright, glowing sunburst or starburst pattern. The sunburst is composed of numerous sharp, radiating lines of yellow and orange light, creating a sense of intense energy and light. Below the sunburst, a curved horizon line separates the bright light from a darker, blue-toned area at the bottom, suggesting a celestial body or a distant landscape.

Cosmos, Earth and Nutrition Richard Thornton Smith, 2013-04-03 In recent years there has been an explosion of interest in organic and biodynamic produce Although once marginal and alternative escalating concerns about the environment health food quality and animal welfare have brought organics into mainstream consciousness Biodynamics a unique development of the organic approach does not narrowly focus on agricultural techniques It was conceived as a new way of thinking about farming nutrition and the world of nature allowing for a revitalized relationship with the living soil the elemental world and the cosmos Originating from a series of eight lectures given by Dr Rudolf Steiner in 1924 biodynamics broadens the outlook of agriculture and the science behind it leading to a holistic perspective that incorporates astronomical rhythms and unique preparations for plants and earth The author describes the foundations on which not only biodynamics but also the wider organic movement is based He builds bridges between mainstream science and Steiner's insights making it easier for the wider organic and ecological movement to approach biodynamic concepts and practise This book has much to offer to the beginner as well as to those already involved with biodynamics Its broad range of topics including the ecology of the farm organism food quality and nutrition community supported agriculture planetary influences seed quality and the vitality of water contribute to a deeper understanding of the subject The author is also concerned to promote innovation so that biodynamics moves with the times An appendix includes details for contacting various elements of the biodynamic world DR RICHARD THORNTON SMITH was formerly a geography professor at the University of Leeds specializing in soil science environment and conservation Widely travelled he has a long standing interest in indigenous and sustainable farming He was introduced to the work of Rudolf Steiner at an early age although his full involvement with biodynamics dates from 1990 when he began to participate in training programmes and workshops at Emerson College Sussex In 1996 he began a

biodynamic extension programme in Sri Lanka for which he published a book most recently updated in 2007 Since 2001 he has been an inspector for the Biodynamic Association s Demeter and Organic Certification in the UK In 2003 he produced an edited selection of Steiner s work relating to agriculture He is currently a council member of the Biodynamic Agricultural Association and lives in Ross on Wye Herefordshire

Scandalous Error C. Philipp E. Nothaft,2018 The Gregorian calendar reform of 1582 which provided the basis for the civil and Western ecclesiastical calendars still in use today has often been seen as a triumph of early modern scientific culture or an expression of papal ambition in the wake of the Counter Reformation Much less attention has been paid to reform s intellectual roots in the European Middle Ages when the reckoning of time by means of calendrical cycles was a topic of central importance to learned culture as impressively documented by the survival of relevant texts and tables in thousands of manuscripts copied before 1500 For centuries prior to the Gregorian reform astronomers mathematicians theologians and even Church councils had been debating the necessity of improving or emending the existing ecclesiastical calendar which throughout the Middle Ages kept losing touch with the astronomical phenomena at an alarming pace Scandalous Error is the first comprehensive study of the medieval literature devoted to the calendar problem and its cultural and scientific contexts It examines how the importance of ordering liturgical time by means of a calendar that comprised both solar and lunar components posed a technical astronomical problem to medieval society and details the often sophisticated ways in which computists and churchmen reacted to this challenge By drawing attention to the numerous connecting paths that existed between calendars and mathematical astronomy between the Fall of Rome and the end of the fifteenth century the volume offers substantial new insights on the place of exact science in medieval culture
