Robert Stephenson – The Eminent Engineer Michael R. Bailey, 2017-07-05 Robert Stephenson the leading engineer of the mid nineteenth century whose substantial public works brought about considerable social change is now the subject of this excellent new biography Robert Stephenson The Eminent Engineer Stephenson s engineering practice was responsible for major railway building programmes in Britain and overseas He oversaw the building of many bridges particularly the innovative tubular bridges in North Wales and was influential in the development of England s railway network Stephenson s engineering practice in Westminster whose many associates were engaged throughout England were responsible for substantial railway building programmes during the mania years of the 1840s By 1850 he was associated with one third of the railway network His overseas railway involvements included building many miles of line and developing national transport plans Robert Stephenson The Eminent Engineer also considers Stephenson s public roles and shows how he was perceived by his contemporaries Stephenson was a Member of Parliament and Commissioner for the Great Exhibition was well respected as an arbitrator received several British and overseas honours and was President of both the Institutions of Civil and Mechanical Engineering

An Historical Geography of Railways in Great Britain and Ireland David Turnock, 2016-12-05 Although a great deal has been published on the economic social and engineering history of nineteenth century railways the work of historical geographers has been much less conspicuous This overview by David Turnock goes a long way towards restoring the balance It details every important aspect of the railway s influence on spatial distribution of economic and social change providing a full account of the nineteenth century geography of the British Isles seen in the context of the railway The book reviews and explains the shape of the developing railway network beginning with the pre steam railways and connections between existing road and water communications and the new rail lines The author also discusses the impact of the railways on the patterns of industrial urban and rural change throughout the century Throughout the historical geography of Ireland is treated in equal detail to that of Great Britain

George and Robert Stephenson David Ross, 2010-03-12 From poverty to immense wealth from humble beginnings to international celebrity George and Robert Stephenson s was an extraordinary joint career Together they overshadow all other engineers with the possible exception of Robert s friend Isambard Kingdom Brunel for one vital reason they were winners For them it was not enough to follow the progress made by others They had to be the best Colossal in confidence ability energy and ambition George Stephenson was also a man of huge rages and jealousies determined to create his own legend Brought up from infancy by his father Robert was a very different person Driven by the need to be the super successful son his father wanted he struggled with self distrust and morbid depression More than once his career and reputation teetered on the edge of disaster But by being flawed he emerges as a far more appealing and sympathetic figure than the conventional picture of the eminent engineer David Ross s new biography of George and Robert Stephenson sheds new light on these two giants of British

engineering **Dod's Peerage, Baronetage and Knightage of Great Britain and Ireland for 1888** ,1888 *Dod's Peerage, Baronetage and Knightage of Great Britain and Ireland, Including All the Titled Classes* ,1904 Physical Models Bill Addis,Karl-Eugen Kurrer,Werner Lorenz,2020-09-25 Physical models have been and continue to be used by engineers when faced with unprecedented challenges when engineering science has been inadequate or even non existent and in any other situation when engineers have needed to raise their confidence in a design proposal to a sufficient level in order to begin construction For this reason models have mostly been used by designers and constructors of highly innovative projects when previous experience has not been available The book covers the history of using physical models in the design and development of civil and building engineering projects including Robert Stephenson s Britannia Bridge in the 1840s the masonry Aswan Dam in the 1890s and the Boulder Dam in the 1930s tidal flow in estuaries and wind and seismic loads on structures from the 1890s the acoustics of concert halls and the design of thin concrete shell roofs from the 1920s and the dynamic behaviour of tall buildings from the 1930s as well as and cable net and membrane structures in the 1960s Individual designers featured include Eduardo Torroja Pier Luigi Nervi Heinz Hossdorf Heinz Isler Frei Otto Sergio Musmeci and Mamoru Kawaguchi The book concludes with overviews of the current use of physical models alongside computer models for example in boundary layer wind tunnels seismic engineering hydrology soil mechanics and air flow in buildings Traditionally progress in engineering has been attributed to the creation and use of engineering science the understanding of materials properties and the development of new construction methods The book argues that the use of reduced scale models has played an equally important part in the development of civil and building engineering However like the history of engineering design itself this crucial contribution has not been widely reported or celebrated The book includes 39 chapters written by 29 authors from ten different countries **George Stephenson** Hunter Davies,2004-07-22 Much is known about the achievements of George Stephenson and of his infamous creation the Rocket yet little is known of the man himself This volume is a profile of the self taught and often testy Geordie whose Victorian invention is now the backbone of every nation on the planet **The Stephenson Railway Legacy** Colin Alexander,Alon Sison,2018-10-15 An evocative and nostalgic tribute to one of the great engineering dynasties the Stephenson family A Biographical Dictionary of Civil Engineers in Great Britain and Ireland: 1500-1830 A.
