

Structural features of drugs and their pharmacological activity

Stereochemistry: Space arrangement of the atoms or three-dimensional structure of the molecule.

Stereochemistry plays a major role in the pharmacological properties because:

- (1) Any change in stereospecificity of the drug will affect its pharmacological activity
- (2) The isomeric pairs have different physical properties (partition coefficient, pK_a , etc.) and thus differ in pharmacological activity.

The following steric factors influence pharmacological activity:

- **Optical and geometric isomerism**
- **Conformational isomerism**
- **Isosterism and bioisosterism**

Smith and Williams' Introduction to the Principles of Drug Design and Action, Third Edition H. John

Smith, Hywel Williams, 1998-05-15 The third edition of this popular textbook builds on the excellent foundations laid down by the earlier editions It provides a thorough introduction to the principles of rational drug design adopting a from the bench to the market place approach As knowledge of biological systems has expanded and the number of techniques available for exploring and visualizing their components has increased it has become possible to design drugs specifically for a given target This unique insight has revolutionized the process of drug development for specific disease states and in this textbook both novel and established approaches are incorporated The introductory text explains the principles of drug design using real examples These illustrate the discovery of lead compounds and their manipulation to produce non toxic drug candidates that will be successfully metabolized to interact with target receptors in a predicted fashion In addition to fully updating the contents of the previous edition the Editor has included important new sections on the pharmacological consequences of drug chirality agonists and antagonists of neurotransmitters and the process involved in proceeding from program sanction to clinical trials

Pharmacokinetics of Drugs Peter G. Welling, Luc P. Balant, 2012-12-06 The author of this Foreword has recently retired after spending 25 years in academia and 15 years in the pharmaceutical industry Most of this time has been spent following and hopefully in some instances contributing to advancement of the discipline of pharmacokinetics During the last 40 years pharmacokinetics has grown from a fledgling in the 1950s to an adult in the 1990s The late development of the discipline of pharmacokinetics relative to other disciplines such as chemistry bio chemistry and pharmacology probably stems both from general ignorance of the importance of the time course of concentration effect relationships in drug therapy and from our technical inability to do anything about it had we been more enlightened Just as the end of the historical dark ages had to await the beginning of the Carolingian revival so the end of the pharma co kinetic dark age had to await the discovery of adequate analytical methods and also an intellectual leap of faith to accept that drug action is in some way dependent on receptor site occupancy and therefore on drug con centration The recent evolution of pharmacokinetics has occurred in three phases which may be identified as those of discovery stabilization and rationaliz ation The discovery phase which occurred in the 1950s and 1960s esta blished the mathematics and concepts of modern pharmacokinetics and sought areas of application ranging from model independent methods through compartment approaches to complex physiological models *Research Grants Index* National Institutes of Health (U.S.). Differentiation of Enantiomers I Volker Schurig, 2013-12-16 The series Topics in Current Chemistry presents critical reviews of the present and future trends in modern chemical research The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology medicine and materials science The goal of each thematic volume is to give the non specialist reader whether in academia or industry a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual concentrating on the methodological thinking that will allow the non specialist reader to understand the information presented Contributions also offer an outlook on potential
