Gass, 1970      Stereo Atlas of Vitreoretinal Diseases Hanyi Min, 2019-11-04 This book introduces up to date knowledge of vitreal and retinal diseases with color fundus illustrations. The retinal layers of different lesions normally look like a single plane for junior doctors in Ophthalmology. With the help of the fundus camera, the stereo color images with different shooting angles are taken and the retina looks vivid and stereoscopic in the photograph. Although the technology of deciphering retina diseases is constantly advancing, the stereo fundus photography SFP is still indispensable which can not only reveal the retina stereoscopically and comprehensively but also has been the gold standard for certain diseases such as glaucoma and retina angiomatous proliferation RAP. Meanwhile, the equipment demands for SFP are not so high and can be easily promoted in the grass roots hospitals. In this book, we carefully collected and organized more than 300 stereo color fundus images and angiography pictures of various vitreal and retinal diseases for readers to recognize the three dimensional features at first glance such as retinal bleeding at different layers, optic disc change of glaucoma, macular diseases, tumors, RAP and polypoidal choroidal vasculopathy PCV.      Gass' Atlas of Macular Diseases E-Book Anita Agarwal, 2011-12-23 The Fifth Edition of Gass Atlas of Macular Diseases by Dr Anita Agarwal provides expert diagnostic guidance on macular disorders and quickly brings you up to date on this evolving specialty. Using a case based approach, it richly depicts a full range of retina and macular diseases including new infectious, degenerative and dystrophic conditions. Take advantage of the latest imaging technologies to identify common and rare disorders and confirm difficult diagnoses with the aid of more than 5 500 high quality images. Rely on the same unique richly illustrated case descriptive format encompassing history, clinical examination and follow up that popularized the original book by the late Dr Donald Gass, the famed ophthalmologist whose clinical expertise set new standards in macular diagnosis. Get expert diagnostic guidance under the new authorship of Dr Anita Agarwal, a protégé of Dr Gass who has compiled the ultimate collection of images and hard to find case studies. Evaluate macular diseases using the latest techniques including fluorescein angiography, optical coherence tomography, OCT, indocyanine green ICG and fundus autofluorescence. Visualize the conditions you're likely to see in practice and confirm your diagnoses by comparing your clinical findings to more than 5 500 images and illustrations over 3 500 in full color.
