Sterilization Of Tissues Using Ionizing Radiations:

Sterilisation of Tissues Using Ionising Radiations J F Kennedy, Glyn O. Phillips, Peter A. Williams, 2005-05-06 Existing methods and processing for sterilising tissues are proving inadequate in many instances Infections have been transmitted from the graft to the recipient and in the USA the Centre for Disease Control and other regulatory bodies have drawn attention to the need for a reliable end sterilisation method which does not damage the functionality of the final tissue Safety of surgical allografts is therefore a major concern due to microbial and viral contamination of tissues which is now a problem even in the most sophisticated centres The Presidents of the main Professional Association of Tissue Banks American European and Latin American met in Vienna to review the situation and concluded that the time was opportune to organise an international high level expert meeting which would identify the best method of using radiation technology to assist in the production of safe tissue allografts Sterilisation of biological tissues with ionising radiations provides the information on this subject presented at an international meeting in Wales supported by the International Atomic Energy Agency New methods of protecting the tissues were presented which at the same time allow the use of sufficiently high doses of ionising radiations to inactivate invading organisms A Code of Practice for the Radiation Sterilisation of Tissues was evaluated and the outcome and the full Code is included in this volume as well as explorations of all of the methodologies used in the field Sterilisation of biological tissues with ionising radiations is the only volume of its kind and as such is an invaluable source of information for those working in tissue banks transplant surgeons and the safety regulators High quality papers highlighting the most recent developments in this important area Includes the full code of practice for the radiation sterilisation of tissues Edited by a highly respected team of experts

Sterilisation of tissues using ionizing radiations John F. Kennedy, Glyn O. Phillips, Peter A. Williams, 2005-05-17 Existing sterilization processes have proven to be inadequate in many instances Microbial and viral contamination of tissues leads to major safety concerns involving surgical allografts Sterilization of Biological Tissues with Ionizing Radiation provides information on the issues presented at an international meeting in Wales supported by the International Atomic Energy Agency It includes a Code of Practice for the Radiation Sterilization of Tissues with an

evaluation of the code and its outcome This book presents all of the methodologies used in the field and outlines new methods of protecting tissues that allow the use of high doses of ionizing radiations to inactivate invading organisms

Nuclear Science Abstracts ,1976 **Essentials of Tissue and Cells Banking** George Galea,Marc

Turner,Sharon Zahra,2021-07-02 It has been 10 years since the first edition of Essentials of Tissue Banking has been published There is still relatively little published on the technical and scientific principles on routine tissue and cell banking based on scientific principles The 1st edition was very successful and after a 10 year gap there is a need of an update and an expansion of the book s remit The format of the book follows that of the previous edition split into 5 sections Management of donors and the banking of common tissues and cells Principles of storage and processing of tissues and cells Ensuring the safety of the products by testing the donor the tissues and the environment supported by a quality system and an IT infrastructure all working within the constraints of current regulatory and ethical environments This edition however provides a significant update Many the chapters have been completely rewritten by different experts Like the 1st edition they were given a free hand in the way they wrote their chapter with a guideline that they had to be concise clear and up to date The authors were also asked to provide the scientific and technical basis that provides the rationale of the processes they describe Also the scope of the book has been somewhat extended In view of the fact that many cellular therapies are now routinely practiced 2 new chapters have been added one on the banking of haematopoietic stem cells and one on human embryonic stem cells They have been deliberately chosen to illustrate the extreme spectrum of cellular therapies from one of the simplest to one of the most complex The intention of the book has remained the same to cover and update banking of current practices in essential tissue and cell banking It is therefore hoped that by keeping the book as concise and up to date
