Literature 1976, Part 2 S. Böhme,Ute Esser,Professor Dr. Walter Fricke,U. Güntzel-Lingner,I. Heinrich,D. Krahn,Dr. Lutz D. Schmadel,G. Zech,2013-04-18 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 18 contains literature published in 1976 and received before March 1 1977 some older literature which was received late and which is not recorded in earlier volumes is also included

Europe to the Stars Govert Schilling,Lars Lindberg Christensen,2013-02-01 The creation of the European Southern Observatory ESO in 1962 was the culmination of the dream of leading astronomers from five European countries Over the years as more member states joined ESO constructed the La Silla and Paranal observatories as well as the Atacama Large Millimeter submillimeter Array ALMA together with partners ESO is now starting to build the world's biggest eye on the sky the European Extremely Large Telescope At the dawn of 2012 its 50th anniversary year ESO is ready to enter a new era One that not even its founding members could have anticipated in their boldest dreams Constantly at the technological forefront ESO is ready to tackle new and as yet unimaginable territories of high precision technology and scientific discovery Produced especially for ESO's 50th anniversary this sumptuously illustrated book takes the reader behind the scenes of the most productive ground based observatory in the world It contains the best 300 of ESO's images hand picked from a large collection of more than 100 000 images Beautifully produced Europe to the Stars tells the story of how dreams of giant telescopes became a reality and covers many of the exciting discoveries made at La Silla and Paranal BBC Sky at Night 1 February 2013 Leave the book on your coffee table certainly but read it first and come back to it regularly It's an intelligent inspiring celebration of a great European scientific adventure Astronomy Now 1 March 2013 **Masters of the Universe** Helge Kragh,2015 This book tells the fascinating history of cosmology using a series of fictitious interview transcripts with the field's leading scientists including giants such as Albert Einstein Edwin Hubble and George Gamow to give the reader a lively and almost authentic impression of the problems that faced this early generation of cosmologists *Walter Baade* Donald E. Osterbrock,2021-01-12 Although less well known outside the field than Edwin Hubble Walter Baade was arguably the most influential observational astronomer of the twentieth century Written by a fellow astronomer deeply familiar with

Baade and his work this is the first biography of this major figure in American astronomy In it Donald Osterbrock suggests that Baade s greatest contribution to astrophysics was not as is often contended his revision of Hubble s distance and age scales for the universe Rather it was his discovery of two distinct stellar populations old and young stars This discovery opened wide the previously marginal fields of stellar and galactic evolution research areas that would be among the most fertile and exciting in all of astrophysics for decades to come Baade was born educated and gained his early research experience in Germany He came to the United States in 1931 as a staff member of Mount Wilson Observatory which housed the world s largest telescope There he pioneered research on supernovae With the 100 inch telescope he studied globular clusters and the structure of the Milky Way every step leading him closer to the population concept he discovered during the wartime years when the skies of southern California were briefly darkened Most Mount Wilson astronomers were working on weapons development crash programs devoted to bringing Baade s native country to its knees while he formally an enemy alien in their midst was confined to Los Angeles County but had almost unlimited use of the most powerful telescope in the world After his great discovery Baade continued his research with the new 200 inch telescope at Palomar Always respected and well liked he became even more famous among astronomers as they shifted their research to the fields he had opened Publicity shy and seemingly unconcerned with publication however Baade s celebrity remained largely within the field This accomplished biography at last introduces Baade and his important work to a wider public including the newest generation of skywatchers

The Beginning of All Things Hans Kng,2008-06-06 In an age when faith and science seem constantly to clash can theologians and scientists come to a meeting of minds Yes maintains the intrepid Hans K ng as he brilliantly argues here that religion and science are not mutually exclusive but complementary Back cover

Does God Exist? Hans Kung,2006-09-22 Does God exist Who is God And can we ultimately trust in any reality These questions have been among the greatest subjects of human speculation since history began but not until modern times has the reality of God been so strongly called into doubt In this monumental study written for men and women of all faiths and of none Hans K ng the most renowned and controversial theologian in the world today first traces the rise of modern atheism in the works of such great thinkers as Descartes Pascal Feuerbach Marx Nietzsche and Freud and then demonstrates brilliantly and in terms that make sense to us today why a yes to God remains a more reasonable and responsible belief than its alternative nihilism

Credo Hans Kung,2003-09-18 In this small lucid gem of a book the controversial Swiss theologian Hans Kung offers his thoughtful explanation of what the ancient profession of Christian faith can mean for us today In doing so Kung also flings a challenging response to the new Catechism of the Catholic Church for Credo is a fresh answer to the conservative stance of today s Vatican a salvo that cannot be ignored While controversy inevitably surrounds all of Kung s books Credo is his most accessible and straightforward work to date written simply for all readers It is the summation of a lifetime of theological thought by one of Christianity s most profound and original thinkers a book that reaches out to non Catholic Christians as

well as to Jews Moslems and those of the Eastern religions and that gives everyone the dignity he or she deserves Kung asks the big questions Can we still believe in God In the Virgin birth In the divinity of Jesus In his resurrection In eternal life And Kung also asks many unusual questions Did Auschwitz disprove the existence in God Is there any real difference between Jesus and the Buddha Is resurrection from the dead un Jewish Must the Church be undemocratic The answers he gives are as always profound and unexpected This is not a book just for Catholics or even just for Christians but a book for anyone with an interest in how religion can be integrated into contemporary life Here is a great modern intellect at his most reader friendly
