while many textbooks start with a discussion of the mixing matrix this book stresses that N O is caused by the transition amplitudes between different neutrino flavors and that the purpose of N O experiments is to measure transition amplitudes and think of its origin The current understanding of neutrino oscillation is also summarized using the most up to date measurements including the recently measured neutrino mixing angle θ_{13} and the future prospects of N O studies are described as well The level of this book makes it a bridge between introductory textbooks and scientific papers
