Hill, 2003-11 When Winfred King was struck with polio in the fall of 1941 his wife Marie and their family

would face challenge in a way they'd never known. The denizens of their hometown, friends, neighbors, and family took care of the Kings, and Marie began to thank them by making candy. This candy making would eventually turn into a profitable business and the Kings' livelihood. From a small operation in their country kitchen with Marie and her three sons doing all the cooking and cleaning to an in-town candy shop in a restored historic train depot with eleven full-time employees, Marie's Home Made Candies has become a historic landmark in West Liberty, Ohio. The store is known as much for its delicious candies as for its inspirational advent. Marie King was a Career Woman out of necessity before the term became fashionable. Her strength, grace, and compassion set an example for all women and men today trying to balance work and family while surviving the various, albeit inevitable, trials this life brings. Marie's example is not how to survive but how to endure, thrive, and shine. Follow and be inspired by the Kings' journey through challenge, faith, and victory over three generations. *Star Maker* Olaf Stapledon, 2008-01-01. This 1937 successor to *Last and First Men* offers another entrancing speculative history of the future. Cited as a key influence by science fiction masters such as Doris Lessing, its bold exploration of the cosmos ventures into intelligent star clusters and mingles among alien races for a memorable vision of infinity. Planetary Formation and Biogenesis Second Edition Ian J. Miller, 2022-05-19. Many observations are interpreted in terms of the then current paradigm. Here a review of almost 1290 scientific papers shows that the significance of some key observations have not been appreciated while some key facts have been ignored. It is assumed planets formed from a distribution of planetesimals, but we do not know how dust accreted to planetesimals. Oligarchic accretion should not apply beyond 10 AU, but this would mean LkCa 15b and TYC 8998 760 1 b and c were impossible. The atmospheres of three of our rocky planets have clearly different atmospheric compositions but they are supposed to come from one source which has the wrong elemental ratios for any of them. The early Earth atmosphere is believed to have been oxidized but samples from the time show that the atmosphere contained much methane and the oceans much ammonia. We cannot understand how Mars could have running water yet there are river valleys. This book argues these and many other problems go away if we assume the initial accretion was caused by chemistry including physical chemistry and our solar system is an archetype for planetary formation. If our water was ammoniacal, why could not the Martian water have been in which case it would flow at the obvious low temperatures. The case is made that life can only evolve from a planet with Earth's chemistry and it evolved around fumaroles. There are at least seven reasons why there will be no life under ice at Europa. These conclusions mainly come from putting together information already known together with a few original propositions. The book ends with a large number of predictions including some from experiments that could be carried out in a lab on Earth.
