The Teaching and Learning of Mathematics at University Level Derek Holton, 2001-09-30 This is a text that contains the latest in thinking and the best in practice It provides a state of the art statement on tertiary teaching from a multi perspective standpoint No previous book has attempted to take such a wide view of the topic The book will be of special interest to academic mathematicians mathematics educators and educational researchers It arose from the ICMI Study into the teaching and learning of mathematics at university level initiated at the conference in Singapore 1998 Special Issue for the ICMI Study on the Teaching and Learning of Mathematics at University Level International Commission on Mathematical Instruction, 2000 *On the Teaching and Learning of Mathematics at University Level*, 1998 Teaching and Learning of Calculus David Bressoud, Imène Ghedamsi, Victor Martinez-Luaces, Günter Törner, 2016-06-14 This survey focuses on the main trends in the field of calculus education Despite their variety the findings reveal a cornerstone issue that is strongly linked to the formalism of calculus concepts and to the difficulties it generates in the learning and teaching process As a complement to the main text an extended bibliography with some of the most important references on this topic is included Since the diversity of the research in the field makes it difficult to produce an exhaustive state of the art summary the authors discuss recent developments that go beyond this survey and put forward new research questions **The Mathematics Teacher in the Digital Era** Alison Clark-Wilson, Ornella Robutti, Nathalie Sinclair, 2013-12-08 This volume addresses the key issue of the initial education and lifelong professional learning of teachers of mathematics to enable them to realize the affordances of educational technology for mathematics With invited contributions from leading scholars in the field this volume contains a blend of research articles and descriptive texts In the opening chapter John Mason invites the reader to engage in a number of mathematics tasks that highlight important features of technology mediated mathematical activity This is followed by three main sections An overview of current practices in teachers use of digital technologies in the classroom and explorations of the possibilities for developing more effective practices drawing on a range of research perspectives including grounded theory enactivism and Valsiner's zone theory A set of chapters that share many common constructs such as instrumental orchestration instrumental distance and double instrumental genesis and research settings that have emerged from the French research community but have also been taken up by other colleagues Meta level considerations of research in the domain by contrasting different approaches and proposing connecting or uniting elements The Professional Education and Development of Teachers of Mathematics Ruhama Even, Deborah Loewenberg Ball, 2008-11-16 The premise of the 15th ICMI Study is that teachers are key to students opportunities to learn mathematics What teachers of mathematics know care about and do is a product of their experiences and socialization together with the impact of their professional education The Professional Education and Development of Teachers of Mathematics assembles important new international work development research theory and practice concerning the professional education of

teachers of mathematics As it examines critical areas to reveal what is known and what significant questions and problems warrant collective attention the volume also contributes to the strengthening of the international community of mathematics educators The Professional Education and Development of Teachers of Mathematics is of interest to the mathematics education community as well as to other researchers practitioners and policy makers concerned with the professional education of teachers

The International Commission on Mathematical Instruction, 1908-2008: People, Events, and Challenges in Mathematics Education Fulvia Furinghetti, Livia Giacardi, 2023-01-30 The book presents the history of ICMI through a prosopographical approach In other words it pays a lot of attention to the actors of the International movement The portraits of the members of the ICMI Central Committees 1908 1936 and ICMI Executive Committees 1952 2008 and other eminent figures in ICMI history who have passed away in the first 100 years of its life are the guiding thread of the volume Each portrait includes Biographical information An outline of the various contributions made by the individual in question to the study of problems pertaining to mathematics teaching education Primary bibliography Secondary with particular attention to the publications concerning the teaching of mathematics Images photos book frontispieces relevant manuscripts The authors of the portraits 30 altogether are researchers in the history of mathematics mathematics and mathematics education The focus on the officer's role within ICMI and on his/her contributions to mathematics education make the portraits different from usual biographies In particular since most officers were active mathematicians the portraits shed light on aspects of their lesser known activity Connecting chapters place the action of these figures in the historical context and in the different phases of ICMI history

2016 and 2018 It is an original contribution which highlights key research perspectives addresses seminal theoretical and methodological issues and reports substantial results concerning the teaching and learning of mathematics at university level including the teaching and learning of specific topics in advanced mathematics across a wide range of university programmes

Research in Collegiate Mathematics Education VII Fernando Hitt,Derek Allan Holton,Patrick W.

Thompson,2010-03-05 The present volume of Research in Collegiate Mathematics Education like previous volumes in this series reflects the importance of research in mathematics education at the collegiate level The editors in this series encourage communication between mathematicians and mathematics educators and as pointed out by the International Commission of Mathematics Instruction ICMI much more work is needed in concert with these two groups Indeed editors of RCME are aware of this need and the articles published in this series are in line with that goal Nine papers constitute this volume The first two examine problems students experience when converting a representation from one particular system of representations to another The next three papers investigate students learning about proofs In the next two papers the focus is instructor knowledge for teaching calculus The final two papers in the volume address the nature of conception in mathematics Whether they are specialists in education or mathematicians interested in finding out about the field readers will obtain new insights about teaching and learning and will take away ideas that they can use **Teaching Geographic**
