Teaching Deaf Learners Harry Knoors, PhD, Marc Marschark, 2014-05 Teaching Deaf Learners asserts that the education of deaf learners profits from an ecological approach to learning and teaching

Issues in Deaf Education Susan Gregory, 1998 First Published in 1998 Routledge is an imprint of Taylor Francis an informa company

The Oxford Handbook of Deaf Studies, Language, and Education, Vol. 2 Marc Marschark, Patricia Elizabeth Spencer, 2010-05-28 Oxford Handbooks offer authoritative and up to date reviews of original research in a particular subject area Specially commissioned chapters from leading figures in the discipline give critical examinations of the progress and direction of debates as well as a foundation for future research Oxford Handbooks provide scholars and graduate students with compelling new perspectives upon a wide range of subjects in the humanities social sciences and sciences The adage Those who do not learn from history are doomed to repeat it is a powerful one for parents teachers and other professionals involved with or interested in deaf individuals or the Deaf community Myths grown from ignorance have long dogged the field and faulty assumptions and overgeneralizations have persisted despite contrary evidence A study of the history of deaf education reveals patterns that have affected educational policy and legislation for deaf people around the world these patterns are related to several themes critical to the chapters of this volume One such theme is the importance of parental involvement in raising and educating deaf children Another relates to how Deaf people have taken an increasingly greater role in influencing their own futures and places in society In published histories we see the longstanding conflicts through the centuries that pertain to sign language and spoken communication philosophies as well as the contributions of the individuals who advocated alternative strategies for teaching deaf children More recently investigators have recognized the need for a diverse approach to language and language learning Advances in technology cognitive science linguistics and the social sciences have alternately led and followed changes in theory and practice resulting in a changing landscape for deaf and hard of hearing individuals and those connected to them This second volume of the The Oxford Handbook of Deaf Studies Language and Education 2003 picks up where that first landmark volume left off describing those advances and offering readers the opportunity to understand the current status of research in the field while recognizing the opportunities and challenges that lie ahead In Volume 2 an international group of contributing experts provide state of the art summaries intended for students practitioners and researchers Not only does it describe where we are it helps to chart courses for the future

Teaching Mathematics to Deaf Children Terezinha Nunes, 2004-09-24 From an early age deaf children excel in thinking about and remembering what they learn through visual spatial instruction This strength in information processing can be used in the mathematics classroom to achieve better learning outcomes This book discusses ways to teach deaf children about the four arithmetic operations through spatial representation in problem solving Examples for the teaching of fractions and graphs are also included These visual representations are useful to support the children s understanding of

mathematical concepts and to promote peer collaboration The teaching programme was tested with deaf children in six schools with excellent results the children in the project made significantly more progress in one school year than expected for either deaf and hearing children over the same time This work was made possible through the generous support of The Nuffield Foundation

Evidence-Based Practice in Educating Deaf and Hard-of-Hearing Students Patricia Elizabeth Spencer, Marc Marschark, 2010-07-21 Debates about methods of supporting language development and academic skills of deaf or hard of hearing children have waxed and waned for more than 100 years Will using sign language interfere with learning to use spoken language or does it offer optimal access to communication for deaf children Does placement in classrooms with mostly hearing children enhance or impede academic and social emotional development Will cochlear implants or other assistive listening devices provide deaf children with sufficient input for age appropriate reading abilities Are traditional methods of classroom teaching effective for deaf and hard of hearing students Although there is a wealth of evidence with regard to each of these issues too often decisions on how to best support deaf and hard of hearing children in developing language and academic skills are made based on incorrect or incomplete information No matter how well intentioned decisions grounded in opinions beliefs or value judgments are insufficient to guide practice Instead we need to take advantage of relevant emerging research concerning best practices and outcomes in educating deaf and hard of hearing learners In this critical evaluation of what we know and what we do not know about educating deaf and hard of hearing students the authors examine a wide range of educational settings and research methods that have guided deaf education in recent years or should The book provides a focus for future educational and research efforts and aims to promote optimal support for deaf and hard of hearing learners of all ages Co authored by two of the most respected leaders in the field this book summarizes and evaluates research findings across multiple disciplines pertaining to the raising and educating of deaf children providing a comprehensive but concise record of the successes failures and unanswered questions in deaf education A readily accessible and invaluable source for teachers university students and other professionals Evidence Based Practice in Educating Deaf and Hard of Hearing Students encourages readers to reconsider assumptions and delve more deeply into what we really know about deaf and hard of hearing children their patterns of development and their lifelong learning
