Photonics National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Board on Physics and Astronomy, Solid State Sciences Committee, Panel on Phototonics Science and Technology Assessment, 1988-02-01 Technology for the United States Navy and Marine Corps, 2000-2035: Becoming a 21st-Century Force National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Naval Studies Board, Committee on Technology for Future Naval Forces, Panel on Technology, 1997-12-19 The future national security environment will present the naval forces with operational challenges that can best be met through the development of military capabilities that effectively leverage rapidly advancing technologies in many areas The panel envisions a world where the naval forces will perform missions in the future similar to those they have historically undertaken These missions will continue to include sea control deterrence power projection sea lift and so on The missions will be accomplished through the use of platforms ships submarines aircraft and spacecraft weapons guns missiles bombs torpedoes and information manpower materiel tactics and processes acquisition logistics and so on Accordingly the Panel on Technology attempted to identify those technologies that will be of greatest importance to the future operations of the naval forces and to project trends in their development out to the year 2035 The primary objective of the panel was to determine which are the most critical technologies for the Department of the Navy to pursue to ensure U S dominance in future naval operations and to determine the future trends in these technologies and their impact on Navy and Marine Corps superiority A vision of future naval operations ensued from this effort These technologies form the base from which products platforms weapons and capabilities are built By combining multiple technologies with their future attributes new systems and subsystems can be envisioned Technology for the United States Navy and Marine Corps 2000 2035 Becoming a 21st Century Force Volume 2 Technology identifies those technologies that are unique to the naval forces and whose development the Department of the Navy clearly must fund as well as commercially dominated technologies that the panel believes the Navy and Marine Corps must learn to adapt as quickly as possible to naval applications Since the development of many of the critical technologies is becoming global in nature some consideration is given to foreign capabilities and trends as a way to assess potential adversaries capabilities Finally the panel assessed the current state of the science and technology S T establishment and processes within the Department of the Navy and makes recommendations that would improve the efficiency and effectiveness of this vital area The panel s findings and recommendations are presented in this report

Terahertz Technology and Its Applications Victor Pacheco Peña, 2021-08-31 The Terahertz frequency range 0.1-10 THz has demonstrated to provide many opportunities in prominent research fields such as high speed communications biomedicine sensing and imaging This spectral range lying between electronics and photonics has been historically known as

terahertz gap because of the lack of experimental as well as fabrication technologies. However many efforts are now being carried out worldwide in order to improve technology working at this frequency range. This book represents a mechanism to highlight some of the work being done within this range of the electromagnetic spectrum. The topics covered include non destructive testing, terahertz imaging and sensing among others.

Polymer Science and Engineering National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Committee on Polymer Science and Engineering, 1994-01-01. Polymers are used in everything from nylon stockings to commercial aircraft to artificial heart valves and they have a key role in addressing international competitiveness and other national issues. Polymer Science and Engineering explores the universe of polymers describing their properties and wide ranging potential and presents the state of the science with a hard look at downward trends in research support. Leading experts offer findings, recommendations and research directions. Lively vignettes provide snapshots of polymers in everyday applications. The volume includes an overview of the use of polymers in such fields as medicine and biotechnology, information and communication, housing and construction, energy and transportation, national defense and environmental protection. The committee looks at the various classes of polymers: plastics, fibers, composites and other materials as well as polymers used as membranes and coatings and how their composition and specific methods of processing result in unparalleled usefulness. The reader can also learn the science behind the technology including efforts to model polymer synthesis after nature's methods and breakthroughs in characterizing polymer properties needed for twenty first century applications. This informative volume will be important to chemists, engineers, materials scientists, researchers, industrialists and policymakers interested in the role of polymers as well as to science and engineering educators and students.

Design of Biomedical Devices and Systems Second edition Paul H. King, Richard C. Fries, 2008-08-22. The design and functional complexity of medical devices and systems has increased during the past half century, evolving from the level of cardiac pacemakers to magnetic resonance imaging devices. Such life saving advancements are monumentally advantageous but with so much at stake a step by step manual for biomedical engineers is essential. This
