landscape performance using the Houston Arboretum and Nature Center HANC as a case site providing the most extensive  
comprehensive description and application of existing landscape performance tools in the current literature to date  
Landscape performance is a measure of the effectiveness with which landscape solutions fulfill their intended purpose and

undergone a pervasive transformation of its 65 acre core as an initial phase of improvements The massive six year effort has  
reconfigured arrival circulation and parking developed new educational facilities constructed a network of walks and trails  
and established sustainable ecologies of prairie savannah riparian woods and upland woods across the northern half of its  
property This book uses landscape performance as an integral method of not only blending science into the design process  
but using scientific outputs as the rationale for design decision making Through this the book showcases a multitude of  
proven quantitative and qualitative evaluation methods which can be applied to other designs and plans calculating their  
specific impacts on the HANC and guiding readers through how to use each tool through an applied process This book

provides a comprehensive set of tools and approaches to measuring landscape performance that could be used as a guide for other projects to replicate or expand upon The book helps move the design professions beyond simple stereotypes of simple beauty of form showcasing and describing how the design professions primarily landscape architecture are an extremely scientific and evidence based industry Landscape Techniques A.
