Technological Change and Network Effects in Growth Regimes Torsten Heinrich,2014-06-03 In this new volume it is argued that network effects are much more common than usually assumed and that they have a profound impact on many aspects of economic systems especially technological change and economic growth The analysis and modelling of this interrelationship is the central focus of this book While there exists a vast body of literature on economic growth the theories put forward so far have had limited success in explaining observed patterns of economic growth Growth cycles in particular continue to elude standard economic models though evolutionary economics has made some progress Seeking to fill the gap Torsten Heinrich s innovative approach uses microeconomics to explain heterogeneous sectoral dynamics on the meso level and then aggregating these to observed macroeconomic growth rates In this way it is shown that an evolutionary model of technological change with network effects can explain not only commonly observed asymmetric industry structures monopolies and oligopolies but also growth cycles The book includes a comprehensive account of the most influential economic growth theories a discussion of the research on network effects as well as an introduction to the methodology the model and a case study on the recent emergence of information and communication technology This important new volume will be relevant to all those interested in theoretical economics growth theory innovation economics agent based modelling and industry dynamics

Direct Protection of Innovation W. Kingston, 2013-04-17 1 When in the late seventies the Commission started its preparatory work on a plan of action I for the creation of a real Community Innovation market obviously the question came up how patents or industrial property could specifically help in stimulating technological and industrial innovation and technology transfer in the Community From an earlier contractor s study 2 about possible items of action in patent law for the improvement of the impact of patents and patenting upon innovation it was clear that in principle there was room for improvement but shortage of information as to how and to what extent efficient improvements should and could be made 2 In

the early 1980s then the need for clarifying the potential for improvement in patent law and patent practice became more pressing so that the Commission convened an informal meeting of experts on 3-4 November 1982 in Luxembourg in order to discuss the issues relevant to the relationship between patent protection and innovation and to identify suitable subject matter for action or study 38 experts from nine Member States coming from different areas of activity in industrial property or in innovation attended the meeting which was chaired by two of them
