The Routledge Companion to Global Internet Histories Gerard Goggin, Mark McLelland, 2017-02-17 The Routledge Companion to Global Internet Histories brings together research on the diverse Internet histories that have evolved in different regions language cultures and social contexts across the globe While the Internet is now in its fifth decade the understanding and formulation of its histories outside of an anglophone framework is still very much in its infancy From Tunisia to Taiwan this volume emphasizes the importance of understanding and formulating Internet histories outside of the anglophone case studies and theoretical paradigms that have thus far dominated academic scholarship on Internet history Interdisciplinary in scope the collection

offers a variety of historical lenses on the development of the Internet as a new communication technology seen in the context of older technologies as a new form of sociality read alongside previous technologically mediated means of relating and as a new media vehicle for the communication of content *Information Technology in Librarianship* Gloria J. Leckie, John E. Buschman, 2008-11-30 In the last 15 years the ground both in terms of technological advance and in the sophistication of analyses of technology has shifted At the same time librarianship as a field has adopted a more skeptical perspective libraries are feeling market pressure to adopt and use new innovations and their librarians boast a greater awareness of the socio cultural economic and ethical considerations of information and communications technologies Within such a context a fresh and critical analysis of the foundations and applications of technology in librarianship is long overdue

Educations and Their Purposes Roger T. Ames, Peter D. Herschok, 2008-01-01 Education is the point of departure for the cultivation of human culture in all of its different forms Although there are many contested conceptions of what is meant by a good education there are few people who would challenge the premise that education is a good thing in which we should heavily invest In this volume representatives of different cultures and with alternative conceptions of human realization explore themes at the intersection of a changing world the values we would choose to promote and embody and the ways in which we educate the next generation Chapters included in Part I Education Relationality and Diversity examine the growing intellectual awareness of a pervasive interdependence amid diversity in all aspects of the human experience brought on by the unrelenting processes of globalization Although the discipline of philosophy has moved over recent years to reconsider the important role of affect in the project of philosophizing this long neglected aspect of human experience has taken on new life within philosophies of education One of the most distinguished voices in the philosophy of emotions offers a sustained reflection in the opening chapter to Part II Educating Emotions The Phenomenology of Feelings Like emotions human somaticity has been an overlooked area of philosophical reflection in the important business of education In Part III East Asian traditions of thought that have never committed to the familiar mind body dualism are appealed to as a resource for rethinking the body in education The tension between personal authenticity and indoctrination in the role that education plays in preparing a person for a successful life is the subject of Part IV Creativity and Habilitation followed by chapters on the mutual accommodation of different approaches to education The final essays discuss the role of aesthetic sensibilities in moral development with the theme The Ethics of Ordinary Technology Michel Puech, 2016-04-28 Technology is even more than our world our form of life our civilization Technology interacts with the world to change it Philosophers need to seriously address the fluidity of a smartphone interface the efficiency of a Dyson vacuum cleaner or the familiar noise of an antique vacuum cleaner Beyond their phenomenological description the emotional experience acquires moral significance and in some cases even supplies ethical resources for the self If we leave this dimension of modern experience unaddressed we may miss something of value in contemporary life Combining European humanism Anglophone pragmatism and Asian

traditions Michel Puech pleads for an ethical turn in the way we understand and address technological issues in modern day society Puech argues that the question of power is what needs to be reconsidered today In doing so he provides a three tier distinction of power power to modify the outer world our first intention method in any case technology power over other humans our enduring obsession politics and domination power over oneself ethics and wisdom *Contentious Geographies* Maxwell T. Boykoff,2016-05-13 The human environment relationship intimately intertwined and often contentious is one of the most pressing concerns of the 21st century Explored through an array of critical approaches this book brings together case studies from across the globe to present significant cutting edge research into political ecologies as they relate to multi form contestations over environments resources and livelihoods Covering a range of issues such as popular discourses of environmental collapse climate change water resource struggles displacement agro food landscapes and mapping technologies this edited volume works to provide a broad and critical understanding of the narratives and policies more subtly shaping and being shaped by underlying environmental conflicts By exploring the power laden processes by which environmental knowledge is generated framed communicated and interpreted *Contentious Geographies* works to reveal how environmental conflicts can be re considered and thus re opened to enhance efforts to negotiate more sustainable environments and livelihoods *The Cambridge Companion to Shakespeare and Popular Culture* Robert Shaughnessy,2007-06-28 This Companion explores the remarkable variety of forms that Shakespeare s life and works have taken over the course of four centuries ranging from the early modern theatrical marketplace to the age of mass media and including stage and screen performance music and the visual arts the television serial and popular prose fiction The book asks what happens when Shakespeare is popularized and when the popular is Shakespeareanized it queries the factors that determine the definitions of and boundaries between the legitimate and illegitimate the canonical and the authorized and the subversive the oppositional the scandalous and the inane Leading scholars discuss the ways in which the plays and poems of Shakespeare as well as Shakespeare himself have been interpreted and reinvented adapted and parodied transposed into other media and act as a source of inspiration for writers performers artists and film makers worldwide Food

Biotechnology in Ethical Perspective Paul B. Thompson,2007-05-05 Agrifood biotechnology the genetic transformation of plants and animals through recombinant means has created controversy in the food system for more than twenty years This thoroughly revised and amended edition of Paul B Thompson s path breaking study of ethical and philosophical issues raised by this technology up to date The original 1997 edition was the first book length treatment by a philosopher to focus on food and agricultural biotechnology covering ethical issues associated with risk assessment labelling animal transformation patents and the impact of biotechnology on traditional farming communities in both the developed and developing world The new edition reflects lessons from the hotly contested debates over those issues in the intervening decade and includes wholly new discussions on ethical issues associated with livestock cloning the Precautionary Principle and the transatlantic debate

between United States and European perspectives on biotechnology Thompson's unique and insightful approach to addressing the risks and questions of public acceptability associated with novel technology stands as a model for anyone interested in technological innovation and social change The book should be of interest to scholars and citizens interested in the Internet or nanotechnology while it remains an essential resource for understanding the twists and turns of debate over the role of molecular genetics in the transformation of the global food system **Changing Education** Peter D.

Hershock, Mark Mason, John N. Hawkins, 2007-12-20 This book responds to the growing unease of educators and non-educators alike about the inadequacy of most current educational systems and programs to sufficiently meet the demands of fast changing societies These systems and programs evolved and were developed in and for societies that have long been transformed and yet no parallel transformation has taken place in the education systems they spawned In the last twenty years or so other sectors of society transportation communication banking health services have radically changed the way they operate but education has continued essentially the same There is no doubt education must change To those ready to accept this challenge this book represents a welcome guide To be sure it is not a how to instruction manual since the shape of change must be particular to the needs and situations of each setting and societies are as varied as they are fast changing Rather than provide specific directions it provides a useful road map for the navigators of change within which each can plot out their specific itineraries towards their goal It illuminates the basic goal of education the total and balanced development of individuals and through them societies and depicts the main features the imperatives the demands and the pitfalls of an ever more interdependent globalized world in which this goal must be pursued My work has exposed me to dozens of international conferences on various education themes and several colleges of education worldwide *Ideologies in*

Transformations for a Sustainable Future Olivier Urbain, Deva Temple, 2011-12-31 It has become increasingly apparent

that humanity's complex social, political, and economic systems are incompatible with the finite capacity of the Earth to replenish resources and absorb wastes. If the planet is to continue to be habitable for the myriad web of other creatures that make life possible, humans must transform their systems so that they are aligned with natural systems. One thing is sure: it will not be Nature's laws, the delicate interdependence that characterizes Earth's ecosystems, that change. The change must begin within each person and from there permeate throughout our social, political, and economic structures. The contributors to this volume believe that such transformations are urgently needed and possible, and they offer specific examples. They suggest solutions that call for new perspectives in our ethics, beliefs, traditions, economy, business, gender relations, education, and technology. They show that human beings have the power to implement changes in all natural and social environments. The chapters in this book have been organized around three keywords: Reconnecting, Reframing, and Rethinking. The contributors argue that we need to reconnect with the Earth and nature as well as with each other and parts of ourselves that we have ignored for too long. We need to reframe the way in which people prioritize choices in the economy, the way we do business, and pursue development, and we need to rethink the mission of education and the roles of technology.

Heltzel, 2016-10-06 Robert Cummings Neville has been a consistent advocate for the necessity of global theology Early in his career he realized that the philosophical framework of the West alone was inadequate for a truly global theology Since then he has sought to develop theology creatively and responsibly within the world context The original essays in this volume written in his honour by fellow theologians participate in and model the kind of dialogical global theology embodied in Neville's work

Valuing Diversity Peter D. Hershock, 2012-12-06

Diversity matters Whether in the context of ecosystems education the workplace or politics diversity is now recognized as a fact and as something to be positively affirmed But what is the value of diversity What explains its increasing significance Valuing Diversity is a groundbreaking response to these questions and to the contemporary global dynamics that make them so salient Peter D Hershock examines the changes of the last century to show how the successes of Western style modernity and industrially powered markets have ironically coupled progressive integration and interdependence with the proliferation of political economic social cultural and environmental differences Global predicaments like climate change and persistent wealth inequalities compel recognition that we are in the midst of an era defining shift from the primacy of the technical to that of the ethical Yet neither modern liberalism nor its postmodern critiques have offered the resources needed to address such challenges Making use of Buddhist and ecological insights Valuing Diversity develops a qualitatively rich conception of diversity as an emerging value and global relational commons forwarding an ethics of interdependence and responsive virtuosity that opens prospects for a paradigm shift in our pursuits of equity freedom and democratic justice
