Solar Technology and Global Environmental Justice Andreas Roos, 2023-02-02 Building on insights from ecological economics and philosophy of technology this book offers a novel interdisciplinary approach to understand the contradictory nature of Solar photovoltaic PV technology Solar photovoltaic PV technology is rapidly emerging as a cost effective option in the world economy However reports about miserable working conditions environmentally deleterious mineral extraction and toxic waste dumps corrode the image of a problem free future based on solar power Against this backdrop Andreas Roos explores whether ecologically unequal exchange an asymmetric transfer of labour time and natural resources is a necessary condition for solar PV development He demonstrates how the massive increase in solar PV installation over recent years would not have been possible without significant wage price differences in the world economy notably between Europe North America and Asia and concludes that solar PV development is currently contingent on environmental injustices in the world economy As a solution Roos argues that solar technology is best coupled with strategies for degrowth which allow for a transition away from fossil fuels and towards a socially just and ecologically sustainable future This book will be of great interest to students and scholars of solar power philosophy of technology and environmental justice

Crop Production and Global Environmental Issues Khalid Rehman Hakeem, 2015-12-08 Meeting the world's food security challenge will require a multi national collaborative effort to integrate the best research from science engineering and socioeconomics so that technological advances can bring benefits where they are most needed The present book covers the effect of major environmental problems on crop production and how to cope with these issues for sustainable agriculture and improvements of crops The world's population is predicted to hit 9.6 Billion by 2050 up from today's total of nearly 7.3 Billion and with it food demand is predicted to increase substantially The post war

second agricultural revolution in developed countries and the green revolution in developing nations in the mid 1960s converted agricultural practices and elevated crop yields spectacularly but the outcome is levelling off and will not meet projected demand Simultaneously crop production is affected by many other factors including industrial pollution overuse of fertilizers and insecticides heavy metal and radiation stresses etc It has been noted that many pests are becoming resistant to insecticides Estimates vary but around 25% of crops can be lost to pests and diseases Climate change associated with agriculture is also a global issue Agriculture is a significant contributor to greenhouse gases and is estimated to account for 10 12% of total greenhouse gas GHG emissions Many of the issues highlighted are global problems and are addressed thoroughly in this work
