Technology And Industry A Nordic Heritage:

Technology & Industry Jan A. H. Hult, B. Nyström (Ed), Hans Weinberger, 1992 *Industrial Heritage in the Nordic and Baltic Countries* Henrik Wager, 2000 **The Cambridge History of Scandinavia: Volume 2, 1520-1870** E. I. Kouri, Jens E. Olesen, 2016-03-24 Volume 2 of The Cambridge History of Scandinavia provides a comprehensive and authoritative account of the Scandinavian countries from the close of the Middle Ages through to the formation of the nation states in the mid nineteenth century Beginning in 1520 the opening chapters of the volume discuss the reformation of the Nordic states and the enormous impact this had on the social structures cultural identities and traditions of individual countries With contributions from 38 leading historians the book charts the major developments that unfolded within this crucial period of Scandinavian history Chapters address topics such as material growth and the centralisation of power in the sixteenth and seventeenth centuries as well as the evolution of trade foreign policy and client states in the eighteenth century Volume 2 concludes by discussing the new economic and social orders of the nineteenth century in connection with the emergence of the nation states **The Peregrine Profession** Per-Olof Grönberg, 2018-11-26 In The Peregrine Profession Per Olof Grönberg offers an account of the pre 1930 transnational mobility of engineers and architects educated in the Nordic countries 1880 1919 Outlining a system where learning mobility was more important than labour market mobility the author shows that more than every second graduate went abroad Transnational mobility was stronger from Finland and Norway than from Denmark and Sweden partly because of slower industrialisation and deficiencies in the domestic technical education This mobility included all parts of the world but concentrated on the leading industrial countries in German speaking Europe and North America Significant majorities returned and became agents of technology transfer and technical change Thereby these mobile graduates also became important for Nordic industrialisation **Industrial Heritage in Denmark** Caspar Jørgensen, Morten Pedersen, 2013-01-24 In presenting 25 industrial sites of national significance in the context of changing techno economic paradigms this book considers the development of Danish industrial landscapes and built up environments in the period 1840 1970 Three case studies of ports sugar mills and cement plants are also presented The book concludes with two chapters that discuss perceptions and strategies for the conversion of industrial sites and an overview is given covering the preservation of industrial heritage in Denmark historically Although Denmark is often perceived as an agricultural country industry is a very important sector in the Danish economy employing a large number of people and having considerable influence on Danish society and culture in general The appreciation of industrial history as well as the tangible and intangible remains of industry is an important heritage Anne Mette Rahbek General Director of the Danish Agency of Culture **Determinants in the Evolution of the European Chemical Industry, 1900-1939** Anthony S. Travis, Harm G. Schröter, Ernst Homburg, Peter J.T. Morris, 2013-04-17 The editors wish to thank the European Science Foundation for its support of the programme on the Evolution of Chemistry in Europe 1789 1939 as well as for sponsoring

the publication of this volume Through the subdivision of this initiative that deals specifically with chemical industry it has been possible for historians of science technology business and economics to share often widely differing viewpoints and develop consensus across disciplinary and cultural boundaries The contents of this volume are based on the third of three workshops that have considered the emergence of the modern European chemical industry prior to 1939 the first held in Liege 1994 the second in Maastricht 1995 and the third in Strasbourg 1996 All contributors and participants are thanked for their participation in often lively and informative debates The generous hospitality of the European Science Foundation and its staff in Strasbourg is gratefully acknowledged Introduction Emerging chemical knowledge and the development of chemical industry and particularly the interaction between them offer rich fields of study for the historian This is reflected in the contents of the three workshops dealing with the emergence of chemical industry held under the aegis of the European Science Foundation s Evolution of Chemistry in Europe 1789 1939 programme The first workshop focused mainly on science for industry 1789 1850 and the second on the two way traffic between science and industry 1850 1914 The third workshop dealing with the period 1900 1939 covers similar issues but within different and wider contexts

Guide to the History of Technology in Europe 2000 Caroline Turney, 2000 The fourth edition of the Guide provides an improved updated directory of over 1000 individuals and organisations involved in the history of technology Comprehensive entries for researchers include job titles addresses telephone and fax numbers as well as e mail addresses main and subsidiary interests and details of one publication by each researcher Institutions are listed according to country and the Guide also gives details of key journals This directory will be invaluable for academics researchers museums and the media and has a place on the desks of all those engaged in the history and development of technology

Continuum Mechanics Through the Twentieth Century Gerard A Maugin, 2013-04-08 This overview of the development of continuum mechanics throughout the twentieth century is unique and ambitious Utilizing a historical perspective it combines an exposition on the technical progress made in the field and a marked interest in the role played by remarkable individuals and scientific schools and institutions on a rapidly evolving social background It underlines the newly raised technical questions and their answers and the ongoing reflections on the bases of continuum mechanics associated or in competition with other branches of the physical sciences including thermodynamics The emphasis is placed on the development of a more realistic modeling of deformable solids and the exploitation of new mathematical tools The book presents a balanced appraisal of advances made in various parts of the world The author contributes his technical expertise personal recollections and international experience to this general overview which is very informative albeit concise

The Culture of Energy Mogens Rüdiger, 2009-05-27 The culture of the modern world involves a sizeable and continuous use of energy The story of energy as a part of modernity begins in the early 19th Century with hard work experiments and the establishment of local energy systems The natural conditions made certain by the alternation between light and dark between warmth and cold was gradually suspended by the introduction of electric

lighting and heating into the home The welfare state has significantly hastened this development to the degree that notions such as wellness and individual well being have become natural elements of our consumer culture and our daily life In most parts of the world we have light whenever we desire it and the homes maintain a comfortable temperature of 21 degrees Celsius by use of either heating or of air conditioning In The Culture of Energy historians social scientists and architects focus on various aspects of the energy culture in Western Europe the United States India and former Soviet Union and examine subjects such as the history of lighting street lighting heating and central heating household uses of energy the debate on nuclear power energy conservation and environmental perspectives on energy Travels of Learning Ana Simões,A. Carneiro,M.P. Diogo,2013-04-17 The idea behind this book grew out of a research project launched by the international group STEP Science and Technology in the European Peripheries established in 1999 by historians of science from Spain Portugal Belgium Greece Turkey Italy Russia Sweden and Denmark The aim has been to re examine the historical and we might also add the geographical character of science and technology and their institutions in regions and societies within Europe usually outside mainstream historical analysis The intended activities of the group have been framed by the following issues reconsidering the centre periphery model which has been the dominant model in studies on the transfer of scientific knowledge bringing to the fore the concept of scientific appropriation and attempting to study the construction of various local discourses systematically examining the relationship between science politics and the rhetoric of modernisation in societies in the European periphery joining forces to find out more about scientific travels using networks to further understand the dynamics and role of scholars on societies in the periphery of Europe intensifying efforts to catalogue and make available to the international community the archival material in the peripheral countries <http://www.cc.uoa.gr/step> on page 2 As a result of these programmatic guidelines a meeting was held in Lisbon in September 2000 in which the topic of scientific travels was used as a particularly good unifying theme on which to base a discussion of case studies involving the European peripheries **Technology and Culture** ,1994 **Encountering the Past in Nature** Timo Myllyntaus,Mikko Saikku,2001 Annotation Six essays by Finnish scholars which accounts for some of the notes being in Finnish discuss the new science of environmental history issues and case studies of change over time in forested Northern Hemisphere zones due to natural and human forces and Western conceptions of wilderness The editors are with the U of Helsinki whose press first published the book in 1999 Annotation copyrighted by Book News Inc Portland OR **Guide to the History of Technology in Europe 1996** Sarah Angliss,1996 **European Historiography of Technology** Dan Ch Christensen,1993 Intends to study the relationship between technology as artefacts and skills and cultural environments academies of science education systems and ethical values in a comparative European perspective *Industrial Heritage Re-tooled* James Douet,2016-07 This book comprises the authoritative work from the International Committee for the Conservation of the Industrial Heritage detailing the latest approaches to and the best practices for the conservation of the global industrial heritage *National*

Science, Geopolitics and Culture in the Polar Region

Professor Sverker Sörlin, 2013-10-28 Throughout the twentieth century glaciologists and geophysicists from Denmark Norway and Sweden made important scientific contributions across the Arctic and Antarctic This research was of acute security and policy interest during the Cold War as knowledge of the polar regions assumed military importance But scientists also helped make the polar regions Nordic spaces in a cultural and political sense with scientists from Norden punching far above their weight in terms of population geographical size or economic activity This volume presents an image of Norden that stretches far beyond its conventional limits covering a vast area in the North Atlantic and the Arctic Sea as well as parts of Antarctica Rich in resources scarce in population but critically important in global and regional geopolitics these spaces were contested by major powers such as Russia the United States Canada and in the Antarctic Argentina Australia South Africa and others The empirical focus on Danish Norwegian and Swedish influence in the polar regions during the twentieth century embraces a diverse array of themes from the role of science in policy and diplomacy to the tensions between nationalism and internationalism with clear relevance to the important role science plays in contemporary discussions about Nordic engagement with the polar regions

Materials, Technologies and Practice in Historic

Heritage Structures Maria Bostenaru-Dan, Richard Pøikryl, Akos Török, 2009-12-15 One distinct feature of human society since the dawn of civilization is the systematic use of inorganic building materials such as natural stone unburnt and burnt soil adobe and brick inorganic binders like lime and cement and reinforced concrete Our heritage has cultural architectural and technological value and preserving such structures is a key issue today Planners and conservation scientists need detailed site surveys and analyses to create a database that will serve to guide subsequent actions One factor in this knowledge base is an understanding of how historic materials were prepared and the crucial properties that influence their long term behaviour Any assessment of the way such materials perform must crucially be based on an understanding of the methods used for their analysis The editors here add to the knowledge base treating the materials used in historic structures their properties technology of use and conservation and their performance in a changing environment The book draws together 18 chapters dealing with the inorganic materials used in historic structures such as adobe brick stone mortars concrete and plasters The approach is complex covering material characterisation as well as several case studies of historic structures from Europe including Germany Ireland Italy Poland Portugal Scotland Slovenia and Spain and the My Son Temples in Vietnam An equally important component of the book covers the analysis of materials together with a treatment of sustainable development such as the protection of monuments from earthquakes and climate change The authors are all leading international experts drawn from a variety of backgrounds architecture civil engineering conservation science geology and material science with close links to professional organisations such as ICOMOS or universities and research centres throughout Europe Audience This book will be of interest to geologists engineers restorers consulting engineers

designers and other professionals dealing with cultural heritage and sustainable development Also graduate students in applied geo science mineralogy geochemistry petrology architecture and civil engineering will find interesting information in this book **Archives Internationales D'histoire Des Sciences** ,1992 *International Directory of Business and Management Scholars and Research: Lor-Z, indexes* Deanna LaValle,1995
