Technology and Innovation for Social Change Satyajit Majumdar, Samapti Guha, Nadiya Marakkath, 2014-12-04 Tension exists between technologists and social thinkers because of the impact technology and innovation have on social values and norms which is often viewed as damaging to the cultural fabric of a nation or society Since the global business environment is the context in which implementation of technology and innovation takes place it is widely accepted as the major reason for such conflicts In this backdrop this edited book integrates independent research from across the globe It deals with the nature and significance of technology innovation and social change as well as the relationships between them and discusses the significance of social entrepreneurship from social innovation and technology perspectives Research areas covered are related to the development and deployment of technology innovation and knowledge in social change capabilities of institutions models role of government and corporate social responsibility and community involvement Multiple aspects of social change are discussed in the context of India Mexico Thailand Cambodia Laos Vietnam Ethiopia Nigeria and other African countries But society does not silently accept technologically enforced changes sometimes technology is seen as an enemy of inclusive growth and for many economic development is an anti thesis of social change Selected case studies on sector specific technologies such as the use of genetically modified seeds in agriculture which has impacted the market and society are critically analyzed to develop insights into the adoption of technology and its impact At the same time it examines policy related issues without any bias in favor of or against a specific technology

Technology, Values, and Society Mitra Das, Shirley Kolack, 2008 Technology is not value free nor does it exist in a vacuum It needs a social basis technology is affected by society and influences it Technology Values and Society illustrates this using an examination of cross cultural case studies representing simple intermediate and complex societies Certain forms of technology exist when conducive values and structures sustain them However this relationship is not one way Technological changes do precipitate social and value changes It is impossible to sustain egalitarian values in a society involving technology based on hierarchical relationships Understanding this connection is vital if we are to keep some control

Vanderburg,2000-12-15 Why does modern technology succeed so brilliantly in some respects and simultaneously fail in others While he was completing a doctoral thesis in mechanical engineering in the late 60s and early 70s Willem Vanderburg became convinced that the environmental crisis and the possible limits to growth

would require a fundamental change in the engineering management and regulation of technology In this volume he exposes the limitations of conventional approaches in these fields Modern societies urgently need to rethink the intellectual division of labour in science and technology and the corresponding organization of the university corporation and government in order to get out of a self destructive pattern where problems are first created by some than then dealt with by others making it almost impossible to get to the roots of anything The result is what he calls the labyrinth of technology a growing patchwork of compensations that merely displace and transform problems from one place to another The author s diagnosis suggests the remedy a new preventive strategy that situates technological and economic growth in its human societal and biospheric contexts and calls for a synthesis of methods in engineering management and public policy and of approaches in the social sciences and humanities He also suggests that this same synthesis can be applied in medicine law social work and other professions The Labyrinth of Technology is a unique and invaluable text for students academics and laypersons in all disciplines and speaks to those who are torn between the benefits that modern technology provides and the difficulties it creates in our individual and collective lives
