**The Service Productivity and Quality Challenge** P.T. Harker, 2012-12-06 3 While all of these explanations seem to have merit there is one dominant reason why the percentage of GDP and employment dedicated to services has continued to increase low productivity According to Baumol s cost disease hypothesis Baumol Blackman and Wolff 1991 the growth in services is actually an illusion The fact is that service sector productivity is improving slower than that of manufacturing and thus it seems as if we are consuming more services in nominal terms However in real terms we are consuming slightly less services That is the increase in the service sector is caused by low productivity relative to manufacturing The implication of Baumol s cost disease is the following Assuming historical productivity increases for manufacturing agriCULTure education and health care Baumol 1992 shows that the U S can triple its output in all sectors within 50 years However due to the higher productivity level for manufacturing and agriculture it will take substantially more employment in services to achieve this increase in output To put this argument in perspective simply roll back the clock 100 years or so and replace the words manufacturing with agriculture and services with manufacturing The phenomenal growth in agricultural productivity versus manufacturing caused the employment levels in agriculture in the U S to decrease rapidly while producing a truly unbelievable amount of food It is the low productivity of services that is the real culprit in its growth of GDP and employment share

**The Changing Nature of Work** National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Committee on Techniques for the Enhancement of Human Performance: Occupational Analysis, 1999-10-07 Although there is great debate about how work is changing there is a clear consensus that changes are fundamental and ongoing The Changing Nature of Work examines the evidence for change in the world of work The committee provides a clearly illustrated framework for understanding changes in work and these implications for analyzing the structure of occupations in both the civilian and military sectors This volume explores the increasing demographic diversity of the workforce the fluidity of boundaries between lines of work

the interdependent choices for how work is structured and ultimately the need for an integrated systematic approach to understanding how work is changing The book offers a rich array of data and highlighted examples on Markets technology and many other external conditions affecting the nature of work Research findings on American workers and how they feel about work Downsizing and the trend toward flatter organizational hierarchies Autonomy complexity and other aspects of work structure The committee reviews the evolution of occupational analysis and examines the effectiveness of the latest systems in characterizing current and projected changes in civilian and military work The occupational structure and changing work requirements in the Army are presented as a case study

**Feminism Confronts Technology** Judy Wajcman, 2013-05-29 Feminism Confronts Technology provides a lively and engaging exploration of the impact of technology on women's lives from word processors to food processors and genetic engineering to the design of cities Comprehensive and critical this book surveys the sociological and feminist literature on technology highlighting the male bias in the way technology is defined as well as developed Wajcman sets the scene with an overview of feminist theories of science and technology encompassing the technologies of production and reproduction as well as domestic technology The author challenges the common assumption that technology is gender neutral looking at whether technology can liberate women or whether the new technologies are reinforcing sexual divisions in society
