in Veterinary Medicine Laura Elizabeth Selmic, Mindaugas Tamosiunas, Blaz Cugmas, 2024-10-24 Veterinary medicine focuses on the prevention, diagnosis, and treatment of medical conditions in animals. Recently, we have witnessed enormous advances in veterinary medicine fuelled mainly by the increased owner spending on pets, which more than doubled in the last decade in the USA. Thus, companion animal medicine is individualized, often resembling the medical situation in humans, which is grounded on state-of-the-art knowledge and infrastructure. A significant proportion of these recent advances are due to integrating novel technology into veterinary clinics and homes. Although the veterinary approach in farmed animals is primarily preventive and focuses on the whole herd, technical solutions are equally crucial for successful livestock management. Human medicine is based on state-of-the-art technology. Some recent advances translated into practice are mRNA technology, telemedicine, health wearables, and artificial intelligence in diagnostics, imaging, and drug discovery. Compared to humans, research focusing on technology in veterinary medicine is scarce and carried out by individuals rather than large research groups. With this special issue, we aim to promote research on various technologies in veterinary medicine. The recent technological advances improving animal health and well-being should be encouraged and disseminated. Moreover, we hope to connect various researchers with the same objectives, which could lead to potential joint ventures resulting in higher excellence and impact.

Production at the leading edge of technology Bernd-Arno Behrens, Alexander Brosius, Wolfgang Hintze, Steffen Ihlenfeldt, Jens Peter Wulfsberg, 2020-09-24 This congress proceedings provides recent research on leading edge manufacturing processes. The aim of this scientific congress is to work out diverse individual solutions of production in the border area and transferable methodological approaches. In addition, guest speakers with different backgrounds will give the congress participants food for thought, interpretations, views, and suggestions. The manufacturing industry is currently undergoing a profound structural change, which on the one hand produces innovative solutions through the use of high performance communication and information technology and on the other hand is driven by new requirements for goods, especially in the mobility and energy sector. With the social discourse on how we should live and act primarily according to guidelines of sustainability, structural change is gaining increasing dynamic. It is essential to translate politically specified sustainability goals into socially accepted and marketable technical solutions. Production research is meeting this challenge and will make important contributions and
