Technology For Premium Quality Castings:

Technology for Premium Quality Castings Edmund Dunn, Delcie R. Durham, 1988 **Premium-quality Aluminum Castings** K. R. Grube, D. N. Williams, H. R. Ogden, 1965 Premium quality castings are those which are guaranteed to show a specified high level of mechanical properties The properties currently being achieved represent significant improvements over those which can be achieved in conventional aluminum alloy castings and approach the properties currently obtainable in wrought aluminum alloys These property advances are largely the result of improved casting technique and design These castings are gradually finding acceptance and usage in aerospace applications thanks to integrated efforts between the casting producers and their customers Author *Precision Forming Technology of Large Superalloy Castings for Aircraft Engines* Baode Sun, Jun Wang, Da Shu, 2021-02-06 This book describes systematically the theory and technology of the precision forming of large complex and thin walled superalloy castings for aircraft engines covering all the important basic aspects of the manufacturing process including process design wax pattern ceramic molds casting and solidification heat treatment repair casting and dimension precision control The correlation of casting defects structural characteristics and performance of castings is revealed through a range of tests It also discusses the latest technologies and advances in this field such as imaging the solidification process by means of synchrotron radiography 3D computerized tomography and reconstruction of microporosity defects analysis and diagnosis of error sources for dimension over tolerance and adjusted pressure casting technology which are of particular interest Providing essential insights the book offers a valuable guide to the design and manufacture of superalloy casting parts for aircraft engines **Foundry Technology** Peter Beeley, 2001-08-24 Foundry Technology brings together basic metal casting phenomena foundry techniques and product characteristics in a single work of reference Peter Beeley was a foundry manager before he became a senior lecturer in metallurgy and subsequently maintained continuous links with the castings industry and associated research activities and publications His book is designed to serve as a bridge between the study of the basic principles of metal founding and their application in the producing and user industries A particular aim of Foundry Technology is to assist engineers and engineering students in appreciating the role of castings in design and materials selection Orthodox and specialized casting processes and both ferrous and non ferrous founding are considered on a comparative basis and the place of castings in design is critically examined and related to other products The revised edition takes account of the main changes in casting processes and products since the publication of the original edition in 1972 While retaining treatments of basic aspects of molding solidification cast structures and feeding newer developments in modeling and rapid prototyping are reviewed together with quality environmental health and other issues of growing importance New edition of well known book Fully updated with latest technology [Research in Premium-quality Castings in Light Alloys](#) Jersey W. Meier, 1965 Extensive research on the structure and properties of cast aluminum and magnesium alloys has been applied to foundry practice The

term premium quality is used to describe castings with reliably high mechanical properties and high integrity of the product guaranteed by the foundry In production conventional equipment and manufacturing techniques may be used but rigid control of metal purity alloy composition melt quality solidification conditions and heat treatment is essential to achieve and maintain high reliability of properties in designated areas of the casting which are graded according to design and service considerations Examples of the excellent properties that have been obtained in aluminum and magnesium alloy castings are listed

Foundry Processes Seymour Katz, 2012-12-06 For a number of years it has been a General Motors Research Laboratories custom to hold a symposium on a subject which is new and emerging and to invite the best people in the world in that subject to come together to talk to each other Initially I had some difficulty in regarding foundry processes as a new and emerging subject Copper alloys have been in foundry practice for about six thousand years Foundrymen working with those alloys have been recognized as such for nearly all that time Iron has a much shorter history probably only three or four thousand years So what's new What is new is that a subject which has always been so complex and so difficult that it could only be a craft skill with bits and pieces of knowledge and bits and pieces of insight has begun to yield to new abilities to solve very complex problems We do this now because we can handle great amounts of data by computational means using new and more complicated theoretical treatments than we could deal with before In fact we have a new technology with which we can attack these terribly difficult problems Thus foundry processing is becoming a new subject because new things can be done with it
