Main Tectonic Events and Metallogeny of the North China Craton Mingguo Zhai,Yue Zhao,Taiping Zhao,2016-07-25 This book focuses on the metallogeny and main tectonic events of the North China Craton from early Precambrian to Phanerozoic It covers the Archean crustal growth Paleoproterozoic rifting subduction collision processes Great Oxidation Event Meso Neoproterozoic multiple rifting Phanerozoic reworking of the North China Craton as well as metallogeny related to above different processes The North China Craton is one of the oldest cratons in the world It has experienced a complex geological evolution since the early Precambrian and carries important records of secular changes in tectonics and metallogeny It provides a systematic review and new results on the growth and evolution of the North China Craton and metallogeny It will be of broad interest to the earth scientists working in the fields of economic geology geochemistry and tectonics of the North China Craton and eastern Asian Measuring and modeling the ground deformation of geological disasters using modern geodesy Xinjian Shan,Jeffrey Todd Freymueller,Caijun Xu,Zhenjie Wang,2023-07-19 Precambrian Geology and Metamorphic Petrology Qian Xianglin,Zhengdong You,Henry Campbell Halls,1998 The proceedings of the 30th International Geological Congress held in Beijing China in August 1997 This volume focuses on Precambrian geology and metamorphic petrology It aims to present a view of contemporary geology to researchers interested in the geological sciences **Field Trip Guide: Precambrian geology and mineral resources and seismology**,1996 *Fractals in Rock Mechanics* Heping Xie,2020-12-18 Important developments in the progress of the theory of rock mechanics during recent years are based on fractals and damage mechanics The concept of fractals has proved to be a useful way of describing the statistics of naturally occurring geometrics Natural objects from mountains and coastlines to clouds and forests are found to have boundaries best described as fractals Fluid flow through jointed rock masses and clusterings of earthquakes are found to follow fractal patterns in time and space Fracturing in rocks at all scales from the microscale microcracks to the continental scale megafaults can lead to fractal structures The process of diagenesis and pore geometry of sedimentary rock can be quantitatively described by fractals etc The book is mainly concerned with these developments as related to fractal descriptions of fragmentations damage and fracture of rocks rock burst joint roughness rock porosity and permeability rock grain growth rock and soil particles shear slips fluid flow through jointed rocks faults earthquake clustering and so on The prime concerns of the book are to give a simple account of the basic concepts methods of fractal geometry and their applications to rock mechanics geology and seismology and also to discuss damage mechanics of rocks and its application to mining engineering The book can be used as a textbook for graduate students by university teachers to prepare courses and seminars and by active scientists who want to become familiar with a fascinating new field **Proceedings of the Symposium on Mesozoic and Cenozoic Geology** Jiqing Huang,1986 Early Continent Evolution of the North China Craton Mingguo Zhai,Peng Peng,Yanyan Zhou,Lei Zhao,2024-03-27 Early

Continent Evolution of the North China Craton discusses the tectono thermal regimes of the early continental crust in the North China Craton NCC from the Hadean to the early Paleoproterozoic reconstructing the evolutionary framework and facilitating comprehensive understanding of the early continent evolution of the NCC The book systematically summarizes the Neoarchean metamorphism of the NCC and discusses the implications for the tectonic models of the NCC through compiling evolutionary information of the Hadean to the early Paleoproterozoic sequences in the NCC This allows for comprehensive summarizations and discussions on the tectonic framework of the NCC during this critical period Researchers academics and students in geology especially Precambrian Geology geomorphology geophysics and geological engineering will benefit from using this book in applying tectonic models to other cratonic blocks globally and will understand evolutionary information of the largest and oldest cratonic block in China Completely covers all key issues and research frontiers of the early continental evolution of the North China Craton NCC from the Hadean to the early Paleoproterozoic Systematically summarizes the Neoarchean metamorphism of the NCC and discusses the implications for tectonic models Includes discussion on controversial views on tectonic regimes of the NCC during the Archean to early Paleoproterozoic with objective conclusions
