Tectonic Globaloney:

Tectonic Globaloney N. Christian Smoot, 2012-05-30 Forty five years after the synthesis of the plate tectonic hypothesis much newer and better information has been gathered by the seagoers of the world Contrary to popular opinion among earth scientists the purveyors of plate tectonics are the present day snake oil salesmen This null hypothesis is fraught with misinformation and misconceptions It is in need of a massive make over Midocean ridge spreading does not occur universally especially in Iceland and the North Pacific basin Deep earthquakes do not define a descending slab in fact do not even occur in most places along the trenches Therefore subduction does not occur Continental drift is a figment of overly active imaginations and Gondwana is an even greater figment India has been in place for several billion years rather than wandering around Index fossils like Lystrosaurus and Cynognathus are misused misdated and show nothing Land bridges have surfaced and been submerged many times over the years allowing for free passage of fauna and flora Fracture zones rather than showing the direction of seafloor spreading leave nothing more than a pattern of at least four different directions on the ocean floor as they intersect in a random fashion The Chicxulub crater is not the result of a bolide strike and this was known from the get go In 2004 the first edition of *Tectonic Globaloney* was published Since that time much new information has been gathered and published The Ocean Drilling Program has gone defunct as the owners of that program finally realized admitted that they were not recovering basement material self admitting that only eight off ridge cores had ever reached real basement Therefore the age of the ocean floor was unknown and the magnetic anomalies are not ground truthed The time has come for the field hands to take over and replace the ideas mostly derived by the geophysicists Plate tectonics does not work

Burger, 1984. **Introduction To Global Tectonic Systems** Yuzhu Kang, 2024-02-08 This book analyzes and studies a large number of geological data in the world by dividing the world into eight types of tectonic systems for the first time. It then puts forward the evolution characteristics of each structural system. It also discusses the main controlling factors of the formation of structural systems and points out that there was no regional metamorphism in the global Paleozoic and some areas of the Mesoproterozoic. These innovative theoretical understandings not only fill in gap of knowledge in the established global tectonic system but also enrich and develop the theory of global geological science. **Global Wrench Tectonics** Karsten M.
