Adapting Minds David J. Buller, 2006-02-17 Was human nature designed by natural selection in the Pleistocene epoch The dominant view in evolutionary psychology holds that it was that our psychological adaptations were designed tens of thousands of years ago to solve problems faced by our hunter gatherer ancestors In this provocative and lively book David Buller examines in detail the major claims of evolutionary psychology the paradigm popularized by Steven Pinker in *The Blank Slate* and by David Buss in *The Evolution of Desire* and rejects them all This does not mean that we cannot apply evolutionary theory to human psychology says Buller but that the conventional wisdom in evolutionary psychology is misguided Evolutionary psychology employs a kind of reverse engineering to explain the evolved design of the mind figuring out the adaptive problems our ancestors faced and then inferring the psychological adaptations that evolved to solve them In the carefully argued central chapters of *Adapting Minds* Buller scrutinizes several of evolutionary psychology s most highly publicized discoveries including discriminative parental solicitude the idea that stepparents abuse their stepchildren at a higher rate than genetic parents abuse their biological children Drawing on a wide range of empirical research including his own large scale study of child abuse he shows that none is actually supported by the evidence Buller argues that our minds are not adapted to the Pleistocene but like the immune system are continually adapting over both evolutionary time and individual lifetimes We must move beyond the reigning orthodoxy of evolutionary psychology to reach an accurate understanding of how human psychology is influenced by evolution When we do Buller claims we will abandon not only the quest for human nature but the very idea of human nature itself

The \$1,000 Genome Kevin Davies, 2015-08-18 In 2000 President Bill Clinton signaled the completion of the Human Genome Project at a cost in excess of 2 billion A decade later the price for any of us to order our own personal genome sequence a comprehensive map of the 3 billion letters in our DNA is rapidly and inevitably dropping to just 1 000 Dozens of men and women scientists entrepreneurs celebrities and patients have already been sequenced pioneers in a bold new era of personalized genomic medicine The 1 000 genome has long been considered the tipping point that would open the floodgates to this revolution Do you have gene variants associated with Alzheimer s or diabetes heart disease or cancer Which drugs should you consider taking for various diseases and at what dosage In the years to come doctors will likely be able to tackle all of these questions and many more by using a computer in their offices to call up your unique genome sequence which will become as much a part of your medical record as your blood
