Adolescence is the last period of growth a person experiences before adulthood and sets the stage for the bulk of adult physiological functions

upset hormonal balance

With the introduction of intoxicants in the vulnerable stages of building, brain development, as well as the central nervous system, can suffer significant impairment and rewire these vital neural pathways

risk-taking behavior

slower brain & central nervous system development

- REASONS FOR TEEN ALCOHOL ADDICTION -

The most common place children and teens are exposed to alcohol use is at home. Easy access & less monitoring

Genetic alcohol predisposition, or co-occurring mental health issues, or a history of trauma
Those who already suffer from mental health disorders such as depression & mood swings

The value and draw of acceptance in a child's life cannot be underestimated, especially when they feel they are misunderstood by family and other adults

Learning by association. Peers and family model the behavior and it is quickly adopted in order to "have fun" and to "relax"

- HOW TO SPOT TEEN ALCOHOLISM -

Uncharacteristic upsets at school with a resulting decline in grades and social gatherings

Increase teen rebelliousness

A change in peer groups to those who also engage in drinking
