VIKAS GUPTA, 2. DR. SHAILESH K SINGH, PREFACE The convergence of Artificial Intelligence AI with the telecommunications and healthcare industries signals a profound shift in how services are delivered decisions are made and outcomes are measured Network operators leverage machine learning models to optimize spectrum allocation predict equipment failures and personalize subscriber experiences in real time Meanwhile healthcare providers harness deep learning algorithms for medical image analysis natural language processing of electronic health records and predictive analytics for patient risk stratification This book Applied AI in Telecom and Healthcare IT Use Cases Architectures and Real World Practices is born of the recognition that while these domains differ in regulatory complexity and operational cadence they share common technological and organizational challenges when integrating AI at scale My journey researching this work began with field visits to leading telecom innovation labs where I witnessed AI driven network slicing prototypes and autonomous fault remediation systems in action Concurrently I engaged with healthcare informatics teams deploying AI models alongside clinical workflows grappling with data interoperability ethical considerations and stringent validation protocols These experiences underscored a central truth

successful AI adoption demands more than sophisticated algorithms It requires robust data engineering pipelines resilient cloud native or edge deployed architectures and governance frameworks that align technical excellence with regulatory compliance and patient or subscriber trust This book is organized into three parts 1 Foundational Principles and Infrastructure Chapters 1 3 explore the technical bedrock of AI in telecom and healthcare IT covering data ingestion feature engineering model training paradigms and architectural patterns from centralized cloud environments to distributed edge deployments We also examine best practices for security privacy and compliance critical in both regulating healthcare data under HIPAA and adhering to telecom regulations like GDPR and CCPA 2 Domain Specific Use Cases In Parts 4 and 5 we delve into representative applications The telecom section examines predictive maintenance for base stations intelligent traffic routing and AI driven customer churn analysis The healthcare section highlights medical image diagnostics real time patient monitoring via IoT devices and natural language processing for automated clinical documentation Each use case is presented with end to end architectural diagrams data flow examples and lessons learned from industry deployments 3 Operationalization Governance The final section synthesizes approaches to deploying AI in production covering continuous model training monitoring and observability MLOps pipelines and governance frameworks that enforce explainability and ethical AI We provide guidance on building cross functional teams implementing CI CD for models and managing the change processes that underpin sustainable innovation This book is designed for data engineers AI practitioners solutions architects and technology leaders seeking actionable insights Each chapter includes code snippets architecture templates and references to open source tools enabling you to adapt the patterns to your organizational context Real world case studies illuminate common pitfalls around data quality model drift and integration complexity along with strategies to mitigate them I extend my gratitude to the many industry experts clinical partners and subscribers who generously shared their experiences and provided invaluable feedback on draft chapters Their commitment to excellence in both telecom and healthcare IT has shaped this material into a practical guide rather than an abstract treatise I hope Applied AI in Telecom and Healthcare IT serves as both a reference and an inspiration as you embark on your own AI initiatives building solutions that are not only technically robust but also ethically grounded and operationally sustainable Authors *Health in the New Communications Age* Maria Fernanda Laires,Maria Júlia Ladeira,Jens Pihlkjær Christensen,1995 This book presents the state of the art and trends in Health Care Telematics the valuable results of the research and development work carried out by more than 50 projects during the AIM programme 1991 94 Project information regarding the dissemination and validation of the project results is elaborated and in the annex a full list of the participants in each project including contact details can be found The second part of the book focuses on the shift of paradigm in the Health Care sector within the Information Society This shift is characterised by a general turn from informatics towards multimedia telematics including the Health Care Telematics The new Telematics Application Programme under the Fourth Framework Programme for Research and
