Random SALOHA and CSMA protocols that are used to access MAC in ad hoc networks are very small compared to the multiple and spontaneous use of the transmission channel So they have low immunity to the problems of packet collisions Indeed the transmission time is the critical factor in the operation of such networks The simulations demonstrate the positive impact of erasure codes on the throughput of the transmission in ad hoc networks However the network still suffers from the intermittency and volatility of its efficiency throughout its operation and it switches quickly to the saturation zone In this context game theory has demonstrated his ability to lead the network to a more efficient equilibrium This we were led to propose our model code set that formalizes the behavior of nodes during transmission within SALOHA networks and CSMA respectively **Telecom, Datacom and Networking for Non-Engineers** Eric Coll, 2023-01-31 Eight in One Telecom
