Stanley Rabun, 2000-02-21 Structural Analysis of Historic Buildings offers the most complete detailed and authentic data available on the materials calculation methods and design techniques used by architects and engineers of the nineteenth and early twentieth centuries It provides today's building professionals with information needed to analyze modify and certify historic buildings for modern use Among the many important features of this book not available in any other single volume are More than 350 line drawings and diagrams taken directly from original sources such as the Carnegie Steele Company's Pocket Companion 1893 and Frank Kidder's The Architect's and Builder's Pocketbook 1902 Hard to find data on period structural components such as cast iron columns and beams wrought iron columns and beams and fireproof terra cotta floor arches Methods for determining what kind of loads structural components were originally designed to bear and methods to determine if they are still capable of performing as intended Extensive coverage of historical foundation systems and empirical design methods for load bearing masonry buildings For any building professional involved in the rapidly growing field of restoring preserving and adapting historic buildings Structural Analysis of Historic Buildings is an invaluable structural handbook [Building Evaluation for Adaptive Reuse and Preservation](#) J.

Stanley Rabun, Richard Miles Kelso, 2009-01-09 This book is designed for architects and engineers who need to evaluate existing buildings for a new use or for continuing a current use It details each step of the evaluation process using an easy to follow and easy to implement approach that greatly reduces the possibility of unexpected costs and setbacks Moreover the book covers every part of the building itself from interior and exterior structures to systems and materials Illustrations throughout the book will help you visualize and perform key procedures In addition the authors examine building evaluation issues for structures of different scales such as medium and small commercial structures and residential buildings Most important the authors help you assess the financial viability of a proposed adaptive reuse or preservation project helping you and potential investors decide whether the proposed project offers a desired return on investment Jacket **Design of**

**Integrally-Attached Timber Plate Structures** Yves Weinand, 2021-09-27 Design of Integrally Attached Timber Plate Structures outlines a new design methodology for digitally fabricated spatial timber plate structures presented with examples from recent construction projects It proposes an innovative and sustainable design methodology algorithmic geometry processing structural optimization and digital fabrication technology transfer and construction are formulated and widely discussed The methodology relies on integral mechanical attachment whereby the connection between timber plates is established solely through geometric manipulation without additional connectors such as nails screws dowels adhesives or welding The transdisciplinary design framework for spatial timber plate structures brings together digital architecture computer science and structural engineering covering parametric modeling and architectural computational design geometry exploration the digital fabrication assembly of engineered timber panels numerical simulations mechanical characterization

design optimization and performance improvement The method is demonstrated through different prototypes physical models and three build examples focusing specifically on the design of the timber plate roof structure of 23 large span arches called the Annen Headquarters in Luxembourg This is useful for the architecture engineering and construction AEC sector and shows how new structural optimization processes can be reinvented through geometrical adaptations to control global and local geometries of complex structures This text is ideal for structural engineering professionals and architects in both industry and academia and construction companies
