Soward,Christopher A. Jones,David W. Hughes,Nigel O. Weiss,2005-03-16 The increasing power of computer resources along with great improvements in observational data in recent years have led to some remarkable and rapid

advances in astrophysical fluid dynamics The subject spans three distinct but overlapping communities whose interests focus on 1 accretion discs and high energy astrophysics 2 solar stellar and galactic magnetic fields and 3 the geodynamo planetary magnetic fields and associated experiments This book grew out of a special conference sponsored by the London Mathematical Society with the support of EPSRC that brought together leading researchers in all of these areas to exchange ideas and review the status of the field The many interesting problems addressed in this volume concern

The Art of Modeling Stars in the 21st Century (IAU S252) International Astronomical Union. Symposium, 2008-12-18 Stellar models are the very basic building blocks with which we build up our knowledge of the Universe New numerical experiments are heralding a new level of sophistication in our ability to model and understand how stars work This volume provides an overview and the most recent advances in modeling of stellar structure and evolution Modeling of stars relies on our understanding of the detailed physical processes happening in stars and the most recent observations of stars made by modern large telescopes and current high technologies IAU Symposium 252 presents the most recent developments in five key areas including improvements of the physical ingredients of stellar models the evolution of low and intermediate mass stars the evolution of massive stars close binary evolution and stellar physics in the era of very large telescopes This overview of stellar research is at a level suitable for research astronomers and graduate students

Cosmic Winds and the Heliosphere J. R. Jokipii, C. P. Sonett, Mark S. Giampapa, 2018-01-30 Until the advent of space physics astrophysical plasmas could be studied only using ground based observations Although observational methods have advanced over recent decades the merging of heliospheric physics with astrophysics is far from complete due to the vastly different techniques employed by astronomers and space physicists That astrophysical plasmas can be studied directly is a major advance in astrophysical research The solar wind from the Sun is only one of many examples of solar winds but it provides scientists with a basis for understanding how these formerly disparate disciplines are related Cosmic Winds and the Heliosphere is a comprehensive

sourcebook on conceptually correlated topics in astrophysical winds and heliospheric physics The contributors review the various kinds of winds such as solar wind winds of cataclysmic variables and winds from pulsating stars They then examine the physics of wind origin and physical phenomena in winds including heliospheric shocks magnetohydrodynamic turbulence and kinetic phenomena A final section considers interactions with surrounding media with contributions ranging from studies of the interstellar cloud surrounding the solar system to considerations of solar wind interaction with comets Prepared to the scrupulous standards of the University of Arizona Space Science Series Cosmic Winds and the Heliosphere is an essential volume for astronomers and space physicists
