Stellar Candles For The Extragalactic Distance Scale:

Stellar Candles for the Extragalactic Distance Scale Danielle Alloin, Wolfgang Gieren, 2003-10-20 This volume reviews the current status with respect to both theory and observation of the extragalactic distance scale A sufficient accuracy is required both for a precise determination of the cosmological parameters and also in order to achieve a better understanding of physical processes in extragalactic systems The standard candles used to set up the extragalactic distance scale reviewed in this book include cepheid variables RR Lyrae variables novae Type Ia and Type II supernovae as well as globular clusters and planetary nebulae

An Introduction to Distance Measurement in Astronomy Richard de Grijs, 2011-09-26 Distance determination is an essential technique in astronomy and is briefly covered in most textbooks on astrophysics and cosmology It is rarely covered as a coherent topic in its own right When it is discussed the approach is frequently very dry splitting the teaching into for example stars galaxies and cosmologies and as a consequence books lack depth and are rarely comprehensive Adopting a unique and engaging approach to the subject An Introduction to distance Measurement in Astronomy will take the reader on a journey from the solar neighbourhood to the edge of the Universe discussing the range of distance measurements methods on the way The book will focus on the physical processes discussing properties that underlie each method rather than just presenting a collection of techniques As well as providing the most compressive account of distance measurements to date the book will use the common theme of distance measurement to impart basic concepts relevant to a wide variety of areas in astronomy astrophysics The book will provide an updated account of the progress made in a large number of subfields in astrophysics leading to improved distance estimates particularly focusing on the underlying physics Additionally it will illustrate the pitfalls in these areas and discuss the impact of the remaining uncertainties in the complete understanding of the Universes at large As a result the book will not only provide a comprehensive study of distance measurement but also include many recent advances in astrophysics

Astronomical Applications of Astrometry M. A. C. Perryman, 2009 The Hipparcos satellite developed and launched by the European Space Agency ESA in 1989 was the first space mission dedicated to astrometry the accurate measurement of positions distances and proper motions of stars Amongst the key achievements of its measurements are refining the cosmic distance scale characterizing the large scale kinematic motions in the Solar neighborhood providing precise luminosities for stellar modelling and confirming Einstein's prediction of the effect of gravity on starlight This authoritative account of the

Hipparcos contributions over the last decade is an outstanding reference for astronomers astrophysicists and cosmologists It reviews the applications of the data in different areas describing the subject and the state of the art before Hipparcos and summarizing all major contributions to the topic made by Hipparcos It contains a detailed overview of the Hipparcos and Tycho Catalogues their annexes and their updates Each chapter ends with comprehensive references to relevant literature

Post-Hipparcos Cosmic Candles Andre Heck,F. Caputo,2012-12-06 In May 1976 when one of us was temporarily associated with Stras bourg Observatory for lecturing on distance determination methods Heck 1978 Pierre Lacroute then in his last year as Director there mod estly requested comments on a project he had been cherishing for quite a few years and which he had been presenting to visitors and colleagues an astrometric satellite His persuasiveness and persistence won support from the scientific com munity from the French space agency CNES and from the European Space Agency ESA the Hipparcos satellite was born It was fitting that Lacroute lived long enough after his retirement to attend the launch of his brainchild in 1989 and to see it successfully operational He knew however he would not enjoy the completion of this long and ambitious mission he passed away on 14 January 1993 a few days before reaching the age of 87 In May 1997 in the prestigious setting of San Giorgio Maggiore in Venice ESA organized a symposium celebrating the presentation of the Hipparcos and Tycho catalogues That conference signalled also the re lease of the first scientific results based at least partially on Hipparcos data An impressive proceedings volume Battrick 1997 of more than nine hundred pages gathering together almost two hundred contributions gave evidence of numerous studies in progress in addition to papers starting to appear in the classical journals The well maintained ESA Hipparcos web site <http://astro.estec.esa> [Planck Scale Effects in Astrophysics and Cosmology](#) Giovanni Amelino-Camelia,Jurek Kowalski-Glikman,2005-06-13 This volume is composed of extensive and detailed notes from the lectures given at the 40th Karpacz Winter School This school focussed on quantum gravity phenomenology with emphasis on its relation to observational astrophysics and cosmology These notes have been carefully edited with the aim to give advanced students and young researchers a balanced and accessible introduction to a rather heavily mathematical subject **Percolation Theory for Flow in Porous Media** Allen Hunt,2005-09-15 The present monograph presents for the first time a unified and comprehensive introduction to some of the basic transport properties of porous media such as electrical and hydraulic conductivity air permeability and diffusion The treatment is based on critical path analysis and the scaling of transport properties which are individually described as functions of saturation At the same time the book supplies a tutorial on percolation theory for hydrologists providing them with the tools for solving actual problems In turn a separate chapter serves to introduces physicists to some of the language and complications of groundwater hydrology necessary for succesful modelling **Quantum Annealing and Related Optimization Methods** Arnab Das,Bikas K. Chakrabarti,2005-11-10 physics **Invariant Manifolds for Physical and Chemical Kinetics** Alexander N. Gorban,Iliya V. Karlin,2005-02-01 By bringing together various ideas and methods for extracting the slow

manifolds the authors show that it is possible to establish a more macroscopic description in nonequilibrium systems The book treats slowness as stability A unifying geometrical viewpoint of the thermodynamics of slow and fast motion enables the development of reduction techniques both analytical and numerical Examples considered in the book range from the Boltzmann kinetic equation and hydrodynamics to the Fokker Planck equations of polymer dynamics and models of chemical kinetics describing oxidation reactions Special chapters are devoted to model reduction in classical statistical dynamics natural selection and exact solutions for slow hydrodynamic manifolds The book will be a major reference source for both theoretical and applied model reduction Intended primarily as a postgraduate level text in nonequilibrium kinetics and model reduction it will also be valuable to PhD students and researchers in applied mathematics physics and various fields of engineering

Cosmic Matter Siegfried Röser, 2008-09-26 This 20th volume in the series contains 16 invited reviews and highlight contributions presented during the 2007 International Scientific Conference of the German Astronomical Society on the topic of Cosmic Matter held in Würzburg Germany The papers published here discuss a wide range of hot topics including cosmology high energy astrophysics astroparticle physics gravitational waves extragalactic and stellar astronomy together representing the roadmap for astroparticle physics in Europe

Dynamics of Extended Celestial Bodies And Rings Jean Souchay, 2006-01-12 Taking both a theoretical and observational perspective this book is an introduction to recent developments in the field of celestial mechanics It emphasizes the application to extended celestial bodies and devotes much attention to rotational aspects In particular it explains the state of art for accurate modelling of the rotation of celestial bodies such as the Earth the Moon and Mercury which involves principles related to hydrodynamics and geodesy Comparisons between the light curves of the asteroids and their rotational state are made and spatial techniques leading to the determination of the Earth's gravitational field are explained Also the book provides a general overview of the collisional processes in the solar system and of the dynamics of the rings It is addressed to graduate students and researchers in space sciences and celestial dynamics

Formation and Evolution of Cosmic Structures Siegfried Röser, 2010-02-16 This 21st volume in the series contains 15 invited reviews and highlight contributions presented during the 2008 International Scientific Conference of the German Astronomical Society on the topic of New Challenges to European Astronomy held in Vienna Austria The papers discuss a wide range of hot topics including cosmology high energy astrophysics astroparticle physics gravitational waves extragalactic and stellar astronomy together representing the roadmap for modern astrophysical research

Statistical Hydrodynamic Models for Developed Mixing Instability Flows Antoine Llor, 2005-12-23 Part textbook part exploratory work this book aims to raise the awareness of students physicists and engineers in turbulence on the modeling of gravitationally induced turbulent mixing flows as produced for instance by Rayleigh Taylor instabilities The discussion is centered on the differences between single fluid and two fluid approaches and it is illustrated with a 0D analysis of two specific elementary models in common use Important deviations are shown to appear on many features among others

Early Universe Eleftherios Papantonopoulos,2005-01-07 The Physics of the Early Universe is an edited and expanded version of the lectures given at a recent summer school of the same name Its aim is to present an advanced multi authored textbook that meets the needs of both postgraduate students and young researchers interested in or already working on problems in cosmology and general relativity with emphasis on the early universe A particularly strong feature of the present work is the constructive critical approach to the present mainstream theories the careful assessment of some alternative approaches and the overall balance between theoretical and observational considerations As such this book will also benefit experienced scientists and nonspecialists from related areas of research Origin and Evolution of the Elements: Volume 4,

Carnegie Observatories Astrophysics Series Andrew McWilliam,Michael Rauch,2004-09-23 This Carnegie volume discusses the origin and evolution of elements in our galaxy and others Meteorites and the Early Solar System II Dante S.

Lauretta,Harry Y. McSween,2006-07 They range in size from microscopic particles to masses of many tons The geologic diversity of asteroids and other rocky bodies of the solar system are displayed in the enormous variety of textures and mineralogies observed in meteorites The composition chemistry and mineralogy of primitive meteorites collectively provide evidence for a wide variety of chemical and physical processes This book synthesizes our current understanding of the early solar system summarizing information about processes that occurred before its formation It will be valuable as a textbook for graduate education in planetary science and as a reference for meteoriticists and researchers in allied fields worldwide

National Optical Astronomy Observatories Newsletter ,2001 **Topics in Hypersonic Flow Theory** Radyadour Kh. Zeytounian,2005-12-20 Hypersonic fluid flows characterized by a low Mach number are mainly linked with geophysical and environmental fluid flows In addition they are relevant to engineers because of their connection with aerodynamics The books brings together insights derived from mathematically rigorous results and combines them with a number of realistic fluid flow situations Asymptotic analytic solutions for the low Mach number cases are developed to provide both insights into the underlying physics as well as benchmarks for numerical computations *Dissipative Solitons* Nail Akhmediev,Adrian

Ankiewicz, 2005-04-25 This volume is devoted to the exciting topic of dissipative solitons i.e. pulses or spatially localised waves in systems exhibiting gain and loss. Examples are laser systems, nonlinear resonators and optical transmission lines. The physical principles and mathematical concepts are explained in a clear and concise way suitable for students and young researchers. The similarities and differences in the notion of a soliton between dissipative systems and Hamiltonian and integrable systems are discussed and many examples are given. The contributions are written by the world's leading experts in the field, making it a unique exposition of this emerging topic.
