Lynden-Bell,Gerry Gilmore,1990-03-31 The visible universe is a small perturbation on the material universe Zwicky and Sinclair Smith in the 1930s gave evidence of invisible mass in the Coma and Virgo Clusters of Galaxies Better optical data has only served to confound their critics and the X ray data confirms that the gravitational potentials are many times larger than those predicted on the basis of the observed stars Dynamical analyses of individual galaxies have found that significant extra mass is needed to explain their rotational velocities On much larger scales tens of megaparsecs there is suggestive evidence that there is even more mass per unit luminosity What is this non luminous stuff of which the universe is made How much of it is there Need there be only one kind of stuff There are three basic possi bili ties all of it is ordinary baryonic matter all of it is some other kind of non baryonic matter or some of it is baryonic and some is non baryonic

Adams, 2010-05-11 In Origins of Existence astrophysicist Fred Adams takes a radically different approach from the long tradition of biologists and spiritual leaders who have tried to explain how the universe supports the development of life He argues that life followed naturally from the laws of physics which were established as the universe burst into existence at the big bang Those elegant laws drove the formation of galaxies stars and planets including some like

our Earth That chain of creation produced all the tiny chemical structures and vast celestial landscapes required for life Ultimately physical laws and the complexity they generate define the kind of biospheres that are possible from an Amazon rain forest to a frigid ocean beneath an ice sheet on a Jovian moon Adams suggests that life was not merely some lucky break but rather a natural outcome of the ascending ladder of complexity supported by our universe Since our galaxy seems to harbor millions of planets with the same basic elements of habitability as Earth the emergence of life is probably not a rare event If life emerges deep inside planets and moons as new research suggests happened on our planet the number of viable habitats is truly enormous Seven chronological chapters take the reader from the laws of physics and birth of the universe to the origins of life on Earth showing how energy flowed exploded and was repeatedly harnessed in replicating structures and organisms In his groundbreaking first book Fred Adams established the five eras of the universe with a focus on its long term future It is perhaps not surprising that he now turns his attention to the mystery of our astronomical origins Here is a stunning new perspective a book of genesis for our time revealing how the laws of physics created galaxies stars planets and even life in the universe Extrasolar Planets and Astrobiology Caleb A. Scharf, 2009 This book offers an advanced introduction to the increasingly robust fields of extrasolar planets and astrobiology This book offers an advanced introduction to the increasingly robust fields of extrasolar planets and astrobiology No other text currently available applies this level of mathematics and physics while also providing an extensive grounding in key issues of chemistry biology and geophysics With extensive references to the literature and chapter ending exercises this book can be used as the core text for teaching undergraduate or introductory graduate level courses The text will also provide astrobiologists with an indispensable User s Manual when guick reference to key mathematical and physical techniques is needed A continually updated online component fully cross referenced with the text is also available Foreword by Geoff Marcy The Future Of The Universe And The Future Of Our Civilization V Burdyuzha, Grigory Khozin, 2000-04-19 The first of its kind the Symposium on the Future of the Universe and the Future of our Civilization examined the current status and future evolution of the Universe the Galaxy the stars and the Sun Among the major subjects of discussion were 1 How was our Universe born 2 How do the Sun and the stars evolve 3 What is the destiny of the solar system and the Universe 4 What are the origins and the future of the biosphere of the Earth 5 What are the prospects of survival of human civilization Special attention was devoted to analysis of humanitarian and philosophical problems of evolution of humankind on the planet Earth and in the Universe Among them were methodological economic sociological and medical aspects of the progress of civilization Scientists from different countries put forward some practical proposals including those describing the possible ways out of the systemic crisis of our civilization
