Regenerative Medicine Gustav Steinhoff, 2011-02-04 Regenerative Medicine is a fastly emerging interdisciplinary field of research and clinical

therapies on the repair replacement or regeneration of cells tissues or organs in congenital or acquired disease This new field of research and clinical development focussing on stem cell science and regenerative biology is just starting to be the most fascinating and controversial medical development at the dawn of the 21st century Viewing the great expectations to restructure and regenerate tissue organs or organisms the current attempts of scientist and physicians are still in an early phase of development This new textbook on Regenerative Medicine from protocol to patient is aiming to explain the scientific knowledge and emerging technology as well as the clinical application in different organ systems and diseases The international leading experts from four continents describe the latest scientific and clinical knowledge of the field of Regenerative Medicine The process of translating science of laboratory protocols into therapies is explained in sections on basic science clinical translation regulatory ethical and industrial issues The textbook is aiming to give the student the researcher the health care professional the physician and the patient a complete survey on the current scientific basis therapeutical protocols clinical translation and practised therapies in Regenerative Medicine

Stem Cells for Myocardial Regeneration Randall J. Lee, 2010-08-09 The field of regenerative medicine is in its infancy state Enthusiasm for the potential of organ regeneration lies with the potential pluripotency of stem cells to differentiate into various tissue types This volume of Methods in Molecular Biology will focus on the use of stem cells for myocardial repair and regeneration The emphasis of this issue will be to provide basic scientists translational investigators and cardiologists a means to evaluate the efficacy and safety of stem cells in a standardized fashion for myocardial regeneration Many different cell types have been considered for myocardial repair Adult card myocytes are unable to survive even when transplanted into normal myocardium The use of fetal or neonatal cardiomyocytes is not a feasible source of cells due to ethical concerns and donor availability Therefore the use of pluripotent stem cells has become the focus of a cell source for myocardial repair and regeneration A variety of stem cell types have been suggested to participate in myocardial repair This has led the investigators to search for the optimal cell type for myocardial repair Reliable isolation of the cell source with the ability to expand the cell population is a prerequisite In the first section of this book methods for isolation of commonly used stem cells being investigated for myocardial regeneration are presented Once a stem cell source has been selected the stem cell needs to be tested in an appropriate animal model before being translated into clinical practice

Stem Cell and Regenerative Medicine Robert E. Marx, Randy B. Miller, 2020-10-12 This textbook was finalized during the worldwide COVID 19 pandemic For years prior to the pandemic clinical trials have shown improvement and cures of pulmonary disorders with the intravenous administration of mesenchymal stem cells These cells are administered into the venous system pass through the heart and then lodge in the capillary network of the lungs where they decrease scar tissue and stimulate the regeneration of new lung tissue The known benefits of cell therapy for pulmonary disease has been the foundation for the use of allogeneic stem cells to effectively treat and in some cases cure COVID 19 related lung disorders Sadly many of the highly qualified health care professionals caring for these critically ill patients are unfamiliar with the concept of stem cells and regenerative medicine This unfamiliarity has resulted in patients throughout the world not receiving the benefit of these potentially life saving treatments The goal of this textbook is to provide a basic scientific and clinical multispecialty reference source for stem cells and regenerative medicine to be used as an extension of the American College of Regenerative Medicine Chapters focus on basic science as well as the extravascular applications of regenerative medicine for all hard and soft tissues of the body including musculoskeletal and orthopedics dental and maxillofacial surgery and dermatology and plastic surgery Other topics include plasma products such as PRP and PPP tissue banking stem cell expansion and regulatory guidelines It is our hope that this textbook will assist in the following areas Academic institutions will utilize this textbook as a reference source to educate health care professionals of the future so that regenerative medicine is integrated into the core curriculum and foundation of medical learning These professionals include medical doctors of all specialties dentists and maxillofacial surgeons veterinarians researchers nurses study coordinators physical therapists occupational therapists perfusionists healthcare and life science attorneys advocates administrators and policy makers Practicing health care professionals who have already finished their training will read this textbook with an open mind and understand more about stem cells and regenerative medicine To provide a foundation of accurate peer reviewed scientific and clinical information for patient and industry advocates as well as those involved in formulation of health care policy
