Keir Giles, 2024-10-24 Who will defend Europe The answer should be obvious Europe should be able to defend itself Yet for decades most of the continent enjoyed a defence holiday outsourcing protection to the United States while banking an increasingly illusory peace dividend Now after three decades of reducing armed forces and drawing down defence industries Europe finds itself close to unprotected while Russia is intent on continuing its war of expansion and the US is distracted and divided In this urgent vital book Keir Giles lays out the stark choices facing leaders and societies as they confront the return of war in Europe He explains how the West's

unwillingness to confront Russia has nurtured the threat and that Putin's ambition puts the whole continent at risk. He assesses the role and deficiencies of NATO as a guarantor of hard security and whether the EU or coalitions of the willing can fill the gap. Above all, Giles emphasises the need for new leadership in defence of the free world after the US has stepped aside and warns that the UK's brief moment of setting the pace for Europe has already been squandered.

FastLane Thomas J. Misa, Jeffrey R. Yost, 2016-01-15. The unique history and development of FastLane, the central nervous system of the National Science Foundation. Since 2000, the National Science Foundation has depended upon its pioneering FastLane e-government system to manage grant applications, peer reviews, and reporting. In this behind-the-scenes account, Thomas J. Misa and Jeffrey R. Yost examine how powerful forces of science and computing came together to create this influential grant management system, assessing its impact on cutting-edge scientific research. Why did the NSF create FastLane, and how did it anticipate the development of web-based e-commerce? What technical challenges did the glitch-prone early system present? Did the switch to electronic grant proposals disadvantage universities with fewer resources? And how did the scientific community help shape FastLane? Foregrounding the experience of computer users, the book draws on hundreds of interviews with scientific researchers, sponsored project administrators, NSF staff, and software designers, developers, and managers.
