Haensler, Kristina Mendicino, Rochelle Tobias, 2020-11-23

Regarding philosophical importance Edmund Husserl is arguably the German export of the early twentieth century In the wake of the linguistic turn s of the humanities however his claim to return to the Sachen selbst became metonymic for the neglect of language in Western philosophy This view has been particularly influential in post structural literary theory which has never ceased to attack the supposed logophobie of phenomenology Phenomenology to the Letter Husserl and Literature challenges this verdict regarding the poetological and logical implications of Husserl s work through a thorough re examination of his writing in the context of literary theory classical rhetoric and modern art At issue is an approach to phenomenology and literature that does not merely coordinate the two discourses but explores their mutual implication Contributions to the volume attend to the interplay between phenomenology and literature both fiction and poetry experience and language as well as images and embodiment The volume is the first of its kind to chart a phenomenological approach to literature and literary approach to phenomenology As such it stands poised to make a novel contribution to literary studies and philosophy Psychosis Risk and Experience of the Self Paul Møller, 2023-04-12 M ller sheds light on the inner aspects of psychosis and psychosis risk and its core experiential phenomena as a method of understanding the individual early psychosis development The book details how such experiences might take shape in the human mind and how a better understanding achieved through detailed clinical conversations can lead to earlier detection and improved interventions M ller also outlines the subjectivity model also called Ipseity Disturbance Model and presents a broad review of different treatment approaches and settings in which work with disturbed self experience could be integrated including psychotherapy in patient milieu therapy supportive treatments psychoeducational family work local networking and medication Psychosis Risk and Experience of the Self will prove essential for experienced and specialised clinicians as well as the more generally interested reader *Traditional Islamic Environmentalism* Tarik M. Quadir, 2013-09-16 This work examines the relevance of traditional Islamic thought and practices for a lasting solution to the current environmental crisis Quadir describes how Seyyed Hossein Nasr challenges Muslims to reclaim their traditional intellectual and Sufi heritage as powerful means toward a most thoughtful approach to the crisis In so doing Nasr urges us to take a critical look at the consequences of the worldviews generated by modern science and technology and offers bold solutions for a more caring relationship between

man and nature The book argues that only a revival of the traditional worldview which perceives all entities of nature as signs of God can effectively respond to the crisis our planet faces      Employment Research and State Traditions Carola Frege,2007-09-06 Contemporary employment research tackles an increasingly globalized subject much of it using empiricist and a theoretical methods increasingly embedded in a market economic paradigm However this stands in stark contrast to employment research s historical roots Exploring these roots Carola Frege traces how employment research was born out of the industrial and also democratic transformations of the 19th century and shows that the variations of employment research can be traced back to nation specific state traditions In particular how countries conceptualized their relationship between political and industrial democracy to what extent their labour movements were more state oriented and what influence the state had on the organization of higher education and scientific research and shaped research topics methods theories and paradigms The book argues that these different research cultures are still with us today despite increasing globalization of the subject matter and growing internationalization of the academic world Based on a comparative historical analysis of research characteristics in Britain Germany and the US this book investigates how employment research developed in different ways in different countries A longitudinal cross country comparison of publications in the main journals of the field reveals that employment research is still deeply embedded in longstanding country specific institutional and ideational traditions Frege makes the case for embracing this diversity and rejuvenating the subject of employment research through a rediscovery of its policy oriented research traditions and a reinstatement of its relevance for society      **Scientific Discovery** Aharon Kantorovich,1993-01-01 Kantorovich analyzes the notion of discovery He views the process as inference and questions whether there is logic or method to discovery He provides an alternative perspective on scientific discovery that explains the difficulties in finding a satisfactory method of discovery Within the framework of evolutionary epistemology discovery is treated as a phenomenon in its own right having psychological and social dimensions Science is viewed as a continuation of the evolutionary process whereby creative discovery plays a role similar to blind mutation in biological evolution From this perspective serendipity and tinkering are key notions in understanding the creative process      Islamic Medical and Scientific Tradition Peter E. Pormann,2011 Presents a selection of articles that illustrate the intellectual curiosity and theoretical vigour with which Arabs and non Arabs living in the medieval Muslim world pursued scientific endeavours The focus is firmly on articles published during the last 20 years during which the discipline has enjoyed a new bloom      Views of the Deity, traditional and scientific: a contribution to the study of theological science, etc James SAMUELSON,1871      Why Narrative? Stanley Hauerwas,L. Gregory Jones,1997-10-28 Narrative Theology is still with us to the delight of some and to the chagrin of others Why Narrative is in reprint because it represents what is still a very important question This diverse collection of essays on narrative theology has proven very useful in university and seminary theology classes It is also of great use as a primer for the educated layperson or church study group Jones and Hauerwas

have done an excellent job of selecting representative essays that deal with appeals to narrative in areas such as personal identity and human action biblical hermeneutics epistemology and theological and ethical method     *All Things Hold Together in Christ* James K. A. Smith, Michael L. Gulker, 2018-01-02 As Christians engage controversial cultural issues we must remember that all things hold together in Christ Col 1 17 even when it comes to science and faith In this anthology top Christian thinkers including Robert Barron Timothy George Stanley Hauerwas Alasdair MacIntyre Mark Noll and N T Wright invite us to find resources for faithful creative thinking in the riches of the church s theological heritage and its worship traditions     **Place of Science in a World of Values and Facts** Loucas G. Christophorou, 2005-12-27 This is an engrossing book It is also an unusual book it is written by a scientist who is quite willing to talk about the softer side of life about things such as love and respect and responsibility and to try and position them in the context of his science He is also willing to talk about religion the manner in which it relates to science and science to it and to attempt reconciliation of both He sets himself a tough task to tread the narrow path between the maudlin and the severely sober In this he is eminently successful He is successful not because he aims at any grand synthesis but because he has chosen the more modest path of simply laying out the cards on the table This work is also unusual for another reason The majority of books that attempt to explain science to a lay public that try to describe its workings its raison d tre its hidden contents its societal impact its implications for our future etc are written by theorists This is hardly surprising The theoretician after all is expected to think deeply to be the great unifier to be concerned with meaning Very few books about science are written by scientists ones who spend their time in a working experimental laboratory This is such a book And because it is it is also a very different book     **Bulletin of the Atomic Scientists** , 1958-05 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin s iconic Doomsday Clock stimulates solutions for a safer world
