Stereo Atlas ,1968 *Hybrid Photography* Sara Hillnhuetter, Stefanie Klamm, Friedrich Tietjen, 2021-04-08 This book explores the territories where manual graphic photographic and digital techniques interfere and interlace in sciences and humanities It operates on the assumption that when photography was introduced it did not oust other methods of image production but rather became part of ever more specialized and sophisticated technologies of representation The epistemological break commonly set with the advent of photography since the nineteenth century has probably been triggered by photographic techniques but certainly owes much to the availability of a plethora of hybrid media media that influence the relation of sciences humanities and their methods and subjects This book will be of interest to scholars in art and visual culture photography and history of photography

Pacific Radio News ,1920 **Stereotactic Techniques in Clinical Neurosurgery** D. Andries Bosch, 2012-12-06 Various textbooks on stereotactic neurosurgery have been published during the last few years Riechert 1980 Schaltenbrand and Walker 1982 Spiegel 1982 all of them dealing with functional stereo tactics as the major subject in the field Diagnostic and therapeutic stereotactic interventions are only briefly described whereas localization techniques are not yet mentioned Since 1980 however an increasing number of reports has been published on CT guided and computer monitored stereotactic performances which enable the surgeon to combine diagnostic and therapeutic efforts in one session With recent progress in scanning techniques including high resolution CT

NMR and PET imaging of the brain it has become possible to study and localize any brain area of interest With the concomitant advances in computer technology 3 dimensional reconstruction of deep seated lesions in stereotactic space is possible and the way is open for combined surgery with stereotactic precision and computer guided open resection This type of open surgery in stereotactic space is already being developed in some centers with the aid of microsurgical fiberoptic and laser beam instrumentation With these advances stereotactic techniques will rapidly become integrated into clinical neurosurgery Stereotactics has become a methodology which enables the surgeon to attack deep seated and subcortical small tumors Neurosurgeons may abandon therapeutic nihilism still frequently seen in glioma treatment in the near future when stereotactic resection will be feasible and remaining tumor cells may be killed by adjuvant treatment modalities still in development
