**Heterocyclic Chemistry** Radha R. Gupta, Mahendra Kumar, Vandana Gupta, 2013-04-17 Today our world increasingly is conceived of as being molecular An ever widening range of phenomena are described logically in terms of molecular properties and molecular interactions The majority of known molecules are heterocyclic and heterocycles dominate the fields of biochemistry medicinal chemistry dyestuffs photographic science and are of increasing importance in many others including polymers adhesives and molecular engineering Thus the importance of heterocyclic chemistry continues to increase and this three volume work by Drs R R Gupta Mahendra Kumar and Vandana Gupta is a welcome addition to the available guides on the subject Its scope places it in a useful niche between the single volume texts and monographs of heterocyclic chemistry and the multivolume treatises The authors have retained the well tried classical approach but have succeeded in placing their own individual spin on their arrangement They have put together a well selected range from among the most important of the vast array of facts available This factual material is ordered in a clear and logical fashion over the three volumes The present work should be of great value to students and practitioners of heterocyclic chemistry at all levels from the advanced undergraduate upwards It will be of particular assistance in presenting a clear and modern view of the subject to those who use heterocycles in a variety of other fields and we wish it well

**Free-Radical Synthesis and Functionalization of Heterocycles** Yannick Landais,2018-05-03 This volume describes the recent developments in the free radical mediated synthesis and elaboration of heterocycles The first chapter dealing with radical cascade processes illustrates the power and the beauty of radical chemistry with some striking examples of total synthesis of complex natural heterocycles As organic chemists strive towards sustainability radical chemistry has recently seen major advances and efforts in this direction including C H activation of arenes and unactivated alkyl groups Photochemical activation for a long time the preferred mode of activation in radical chemistry has also seen an unexpected revival with the

advent of visible light metal and organocatalyzed photoredox processes A survey of these emerging areas is provided along with the concepts at the origin of these developments The venerable Minisci reaction allows for direct access to functionalized heterocycles This process has lately seen an interesting renaissance and is discussed in this volume Addition of heteroatom centered radicals onto unsaturated systems constitutes another powerful method to construct heterocycles Examples of such a strategy are proposed along with the formation of various heterocycles relying on homolytic substitution at sulfur phosphorus and selenium Additionally free radical functionalization of reactive functional groups including isonitriles isothiocyanates and related unsaturated systems which offer a straightforward route towards useful aromatic and non aromatic heterocycles are discussed Finally as metals are able to trigger single electron transfer both in reductive and oxidative modes this provides another possibility for the synthesis of heterocycles Significant research efforts have focused on the use of samarium copper and other metals to access a broad variety of heterocycles in a single pot process starting from readily available raw material Examples and mechanistic insights are discussed by experts in this area
