Stereotaxic Atlas Of The Golden Hamster Brain:

A Stereotaxic Atlas of the Golden Hamster Brain Lawrence P. Morin, Ruth I. Wood, 2001-03-12 This atlas provides a look at the golden hamster brain in stereotaxic coordinates which is the grid that is used much like a map to ensure accuracy within the lab It provides a pictorial synopsis of what is currently known about the structure and function of the brain and provides a consistent anatomical definition and nomenclature labeling for areas in the brain This is the first atlas to preset the golden hamster brain in stereotaxic coordinates The authors use the brain of an adult male golden hamster the most widely utilized hamster in neuroscience research The brains of two different hamsters are used The first brain is sectioned and stained using cresyl violet acetylcholinesterase Sudan black and NADPH diaphorase The second brain is stained using cresyl violet luxol fast blue serotonin immunoreactivity and GABA benzodiazepine receptor immunoreactivity Schematic Stereotaxic Atlas of the Golden Hamster Brain Charles W. MRI/DTI Atlas of the Rat Brain George Paxinos, Charles Watson, Evan Calabrese, Alexandra Badea, G. Allan Johnson, 2015-05-28 MRI DTI Atlas of the Rat Brain offers two major enhancements when compared with earlier attempts to make MRI DTI rat brain atlases First the spatial resolution at 25 μ m is considerably higher than previous data published Secondly the comprehensive set of MRI DTI contrasts provided has enabled the authors to identify more than 80% of structures identified in The Rat Brain in Stereotaxic Coordinates Ninety six coronal levels from the olfactory bulb to the pyramidal decussation are depicted Delineations primarily made on the basis of direct observations on the MRI contrasts Each of the 96 open book pages displays four items top left the directionally colored fractional anisotropy image derived from DTI DTI FAC top right the diffusion weighted image DWI bottom left the gradient recalled echo GRE and bottom right a diagrammatic synthesis of the information derived from these three images plus two additional images which are not displayed ARDC and RD This is repeated for 96 coronal levels which makes the levels 250 μ m apart The FAC images are shown in full color The orientation of sections corresponds to that in Paxinos and Watson's The Rat Brain in Stereotaxic Coordinates 7th Edition 2014 The images have been obtained from 3D isotropic population averages number of rats 5 All abbreviations of structure names are identical to the Paxinos Watson histologic atlas

The Central Nervous System of Vertebrates Rudolf Nieuwenhuys, Hans J. ten Donkelaar, Charles Nicholson, 2014-11-14 This comprehensive reference is clearly destined to become the definitive anatomical basis for all neuroscience research The book provides a complete overview and comparison of the structural organization of all vertebrate groups ranging from amphioxus and lamprey through fishes amphibians and birds to mammals The large specialised section of the work devoted to the CNS of the various vertebrate groups is preceded by introductory chapters on neurons cell masses fibre tracts morphogenesis methodology and techniques Although focusing on structure the authors provide functional correlations throughout This monumental work is and will remain unique the only source of such brilliant illustrations at both the macroscopic and microscopic levels
