Steroid Contraceptives And Womens Response Regional Variability In Side Effects And Steroid Pharmacokinetics:

Steroid Contraceptives and Women's Response Rachel Snow, Peter Hall, 2012-12-06 Pharmacokinetic variability of contraceptive steroids is a relatively under explored area of contraceptive research and hardly a common point of discussion among those who plan and deliver family planning services Nevertheless numerous independent studies over the last 15 years have indicated that women in different regions of the world vary in their pharmacokinetic response to contraceptive steroids The causes of such variability are not known but it has important consequences for contraceptive effectiveness It may also offer insight to the basis of contraceptive side effects The impetus for this volume was to collect documentation of pharmacokinetic variability of contraceptive steroids and to explore both the possible causes and implications of these data Factors known to affect steroid pharmacokinetics such as concurrent use of specific medications are reviewed by Back and Orme Other factors known to affect endogenous steroid dynamics are presented in chapters by Bradlow Longcope Goldin and Snow because of their possible role in contraceptive steroid pharmacokinetics

Steroid Contraceptives and Women's Response Rachel Snow, Peter Hall, 1994-07-01 **Contraceptive Research and Development** Institute of Medicine, Committee on Contraceptive Research and Development, 1996-11-04 The contraceptive revolution of the 1960s and 1970s introduced totally new contraceptive options and launched an era of research and product development Yet by the late 1980s conditions had changed and improvements in contraceptive products while very important in relation to improved oral contraceptives IUDs implants and injectables had become primarily incremental Is it time for a second contraceptive revolution and how might it happen Contraceptive Research and Development explores the frontiers of science where the contraceptives of the future are likely to be found and lays out criteria for deciding where to make the next R D investments The book comprehensively examines today's contraceptive needs identifies niches in those needs that seem most readily translatable into market terms and scrutinizes issues that shape the market method side effects and contraceptive failure the challenge of HIV AIDS and other sexually transmitted diseases and the implications of the women's agenda Contraceptive Research and Development analyzes the response of the pharmaceutical industry to current dynamics in regulation liability public opinion and the economics of the health sector and offers an integrated set of recommendations for public and private sector action to meet a whole new generation of demand

Endocrinology of Embryo—Endometrium Interactions Stanley R. Glasser, Joy Mulholland, Alexandre Psychoyos, 2012-12-06 Early embryonic loss is a continuing social and economic global problem In human populations the estimates of interruptions early in pregnancy range from 35 60% In animal husbandry swine ruminants fully 30% of pregnancies fail to survive early events of gestation The futility associated with this persistent high risk is even more unsettling because of advances made in assisted reproductive technology which although this very selective methodology has added to our knowledge of embryo endometrial interactions has resulted in a birth rate of only 14% These studies have instigated comparisons of the live relative contributions of the embryo and the uterus to the

outcome of pregnancy These analyses have shown that we have learned significantly less about the role of the uterus in deciding the outcome of either natural or assisted pregnancies In 1979 a quotation by George Corner was used to set the tone of a meeting that was devoted to discussion of the cellular and molecular aspects of implantation In spite of the proliferation in research activity which occurred in the following 15 years our real understanding of the embryo transfer process has fallen short of our expectations We use the Corner quotation once again to preface this symposium so that we may recall that the fundamental nature of the process which regulates embryo endometrial interactions still escapes us

Male-Mediated Developmental Toxicity Andrew F. Olshan, Donald R. Mattison, 2012-12-06 The cause of many of the adverse reproductive outcomes and developmental diseases among offspring is not well understood Most of the epidemiologic and experimental animal research has focused on the relationship between maternal exposures including medications tobacco smoke alcohol infections and occupation and the occurrence of spontaneous abortion low birth weight and birth defects The potential role of paternal exposures has not been investigated as extensively despite long standing animal research that demonstrates the induction of mutations in the male germ cell after exposure to certain agents and subsequent reproductive failure or early pregnancy loss Given this relative lack of interest acquisition of epidemiologic data and the development of a definitive model or mechanism for potential male mediated effects has been hindered However recent laboratory and epidemiologic investigations have suggested that paternal exposures may be more important than previously suspected This topic has been termed by some as male mediated developmental toxicity This is meant to refer to the effects of exposures and other factors relating to the male parent that result in toxicity to the conceptus and abnormal development The developmental endpoints of interest can include fetal loss congenital abnormalities growth retardation cancer and neurobehavioral effects These effects may operate through a variety of mechanisms including gene mutation chromosomal aberrations seminal fluid transfer of toxicants and epigenetic events
