Technical Change and Social Conflict in Agriculture Martin E Pineiro, Taylor & Francis Group, Eduardo J Trigo, 2021-02-19
Incorporating case studies of technological change in six Latin American countries this book presents the results of a large cooperative research project PROTAAL that has led to a new interpretation of the process of technical change in agricultural development The contributors contrast the perspective emerging from PROTAAL with two other views of technical change in agriculture the theory of induced innovation and the political economy approach They then describe the methodology developed by PROTAAL which is highlighted in their analysis of the case studies In the concluding chapters the authors address important issues concerning the organization of agricultural research activities at the national and international levels and consider theoretical and policy implications for the analysis of technical change in Latin American agriculture

Technical Change And Social Conflict In Agriculture Martin E Pineiro, Eduardo J Trigo, 2019-06-21 This book presents the intellectual production of the first phase of the Cooperative Research Project on Agricultural Technology in Latin America PROTAAL and the most relevant papers presented by invitees at a meeting held in San Jose Costa Rica in September 1981

Knowledge Generation and Technical Change Steven Wolf, David Zilberman, 2012-12-06 Knowledge generation and transfer mechanisms are being transformed in important and controversial ways Investment in research and development has increased in response to recognition that scientific productivity is tightly connected to economic dynamism Patent protection has been expanded in order to stimulate higher levels of private investment Intellectual property rights held by public organizations and researchers are now increasingly transferred to private organizations to accelerate the diffusion and enhance the value of knowledge produced by public agencies and universities Additionally new institutions such as university offices of technology transfer venture capital markets and a variety of consortia in knowledge intensive industries are being established throughout the United States and in other parts of the world These changes have led to a repositioning of the state in systems of innovation and an increase in the proprietary character of technical information The purpose of this book is to review and analyze i contemporary transitions in agricultural knowledge generation and extension arrangements from an empirical perspective and ii emerging and contradictory perspectives as to how knowledge systems can be assessed effectively The authors aim to provide the reader with a better understanding of the implications of new biotechnologies and new intellectual property rights regimes on public private relations in science the extent to which benefits from scientific knowledge are being appropriated by private sector actors the diversity and possible outcomes of privatization initiatives in extension and prospects for public goods production and ecological sustainability given contemporary trends The book presents contrasting views on the degree of complementarity and substitution between

private and public sector investments in research and extension Recognizing that the labels public and private are incomplete and at times misleading descriptions of the structure and function of coordinating bodies in social systems the analyses highlight ways in which public and private spaces and modes of functioning combine In addition to illustrating a broad range of analytic methodologies useful for studying organizational questions in knowledge systems the authors identify the implications of a range of past and potential institutional innovations

Much is written in the popular literature about the current pace of technological change But do we have enough scientific knowledge about the sources and management of innovation to properly inform policymaking in technology dependent domains such as energy and the environment While it is agreed that technological change does not fall from heaven like autumn leaves the theory data and models are deficient The specific mechanisms that govern the rate and direction of inventive activity the drivers and scope for incremental improvements that occur during technology diffusion and the spillover effects that cross fertilize technological innovations remain poorly understood In a work that will interest serious readers of history policy and economics the editors and their distinguished contributors offer a unique single volume overview of the theoretical and empirical work on technological change Beginning with a survey of existing research they provide analysis and case studies in contexts such as medicine agriculture and power generation paying particular attention to what technological change means for efficiency productivity and reduced environmental impacts The book includes a historical analysis of technological change an examination of the overall direction of technological change and general theories about the sources of change The contributors empirically test hypotheses of induced innovation and theories of institutional innovation They propose ways to model induced technological change and evaluate its impact and they consider issues such as uncertainty in technology returns technology crossover effects and clustering A copublication of Resources for the Future RFF and the International Institute for Applied Systems Analysis IIASA
