Lecture Notes on Resource and Environmental Economics Anthony C. Fisher, 2020-06-26 This book based on lectures on natural and environmental resource economics offers a nontechnical exposition of the modern theory of sustainability in the presence of resource scarcity It applies an alternative take on environmental economics focusing on the economics of the natural environment including development computation and potential empirical importance of the concept of option value as opposed to the standard treatment of the economics of pollution control The approach throughout is primarily conceptual and theoretical though empirical estimation and results are sometimes noted Mathematics ranging from elementary calculus to more formal dynamic optimization is used especially in the early chapters on the optimal management of exhaustible and renewable resources but results are always given an economic interpretation Diagrams and numerical examples are also used extensively The first chapter introduces the classical economists as the first resource economists in their discussion of the implications of a limited natural resource base agricultural land for the evolution of the wider economy A later chapter returns to the same concerns along with others stimulated by the energy and environmental crises of the 1970s and beyond One section considers alternative measures of resource scarcity and empirical findings on their behavior over time Another introduces the modern concept of sustainability with an intuitive development of the analytics A chapter on the dynamics of environmental management motivates the concept of option value shows how to compute it then demonstrates its importance in an illustrative empirical example The closing chapter on climate change first projects future changes and potential catastrophic impacts then discusses the policy relevance of both option value and discounting for the very long run This book is intended for resource and environmental economists and can be read by interested graduate and advanced undergraduate students in the field as well

Resource and Environmental Economics Anthony C. Fisher, 1981-11-30 This book presents the major themes of the economic literature on natural resources and the environment It is designed to bring the reader in part with the aid of a unified model of optimal resource use to the frontiers of the discipline using only elementary mathematical models Features special to exhaustible and renewable resources including the problems posed by market imperfections are treated as extensions of the basic model The theoretical discussion is enriched with examples and applications including a systematic investigation of the behaviour of resource reserves costs prices and substitution possibilities Substantial attention to environmental as well as extractive resources is a distinctive aspect of this book The

author describes methods of estimating the environmental costs of resource development and other projects and presents some key empirical findings Policy instruments to protect the environment such as taxes subsidies marketable permits and direct controls are carefully analysed from a welfare theoretic point of view The Economics of Natural Environments John V. Krutilla,Anthony C. Fisher,2022-03-01 In this pioneering study Krutilla and Fisher put the amenity resources of natural environments into an analytical framework comparable to that for the extractive resources The models and theoretical background of their techniques are illustrated by case studies which include the controversial Hells Canyon dam the Mineral King ski resort and the Trans Alaska pipeline The authors point out that resource development activities undertaken on public lands often receive financial advantages preferential tax treatment subsidized capital and access to public resources that are not taken into account in the costs of the project True evaluation of the costs and benefits of a development project often tips the balance in favor of preserving an area in a natural state *Economic Growth and Resources* Christopher Bliss,M. Boserup,1980-07-17 *An Induced Innovation Interpretation of Technical Change in Agriculture in Developed Countries* , Technical Change And Social Conflict In Agriculture Martin E Pineiro,Eduardo J Trigo,2019-06-21 This book presents the intellectual production of the first phase of the Cooperative Research Project on Agricultural Technology in Latin America PROTAAL and the most relevant papers presented by invitees at a meeting held in San Jose Costa Rica in September 1981 **Cost-Benefit Analysis for Project Appraisal** Per-Olov Johansson,Bengt Kriström,2016 This book uses modern economic tools to obtain general equilibrium cost benefit rules It not only presents evaluation rules for small projects but also shows how to evaluate large projects as well as mega projects such as high speed rails and channel tunnels This is an excellent toolkit for graduate students and policymakers Global Environmental Economics H.W.
